Transnational Narratives and Regulation of GMO Risks Giulia Claudia Leonelli, 2021-11-04 This book provides an innovative insight into the regulatory conundrum of genetically modified organisms GMOs deploying transnational legal analysis as a methodological framework to explore the most controversial area of risk governance The book deconstructs hegemonic and counter hegemonic transnational narratives on the governance of GMO risks cutting across US law EU law the WTO Agreement on Sanitary and Phytosanitary Measures and hybrid standard setting regimes Should uncertain risks be run unless adverse effects have been conclusively established and should regulators only act where this is cost benefit effective Should risk managers make a convincing case that a product or process is safe enough for the relevant uncertain risks to be socially acceptable How can intractable transnational regulatory conflicts be solved The book complements a close analysis of regulatory frameworks and case law with a more encompassing perspective on the political socio economic and distributional implications of different approaches to the regulation of health and environmental risks at times of globalisation The GMO deadlock thus becomes a lens through which to investigate the underlying value systems goals and impacts of transnational discourses on risk governance Against this backdrop the normative strand of analysis points to the limited ability of science and procedural deliberation to generate authentic agreement and to identify normatively legitimate solutions in the absence of pre existing shared perspectives

Regulating Risk Thomas A. Burke,1993 Summarizes the presentations made at a conference on the subject of health safety and environmental risk Discusses such issues as the roles and limitations of science in understanding risk how federal agencies charged with safeguarding the public from risk decide which hazards to address whether traditional approaches to assessing risk are working to promote and enhance public safety the influence of politics economics and perceptions on risk policy how the public perceives risk and what role the media plays in creating those perceptions **Risk** Jakob Arnoldi,2009-04-06 This book gives a comprehensive yet easily accessible introduction to risk and uncertainty as they have been analysed in sociology and related social sciences The book draws extensively on the wide array of contemporary social theories of risk and relates these to the many and diverse areas in contemporary society where risk plays an important role It will be an invaluable for both students and researchers interested in risk in relation to politics the environment health media science and technology and finance Written in a clear and accessible language the book gives a balanced account of the many theoretical approaches taken to the diverse phenomenon of risk using concrete examples to illustrate abstract points The book highlights some key themes such as uncertainty and individual responsibility which emerge as common to different theories and fields of study The book is perfectly suited as an introduction for new students in sociology political science anthropology media studies and health studies **The Politics of Chemical Risk: Scenarios for a Regulatory Future** R. Bal,Willem Halffman,2013-04-17 All industrial countries have developed regulatory systems to assess and manage the risk of chemical substances to the working and natural environment The pressure to harmonize these often specialized regulatory systems is increasingly strong at the international level Such harmonization not only entails the assessment of particular

chemicals but also the way assessment procedures and their boundary with risk management is organized. As these initiatives intensify they increasingly raise important questions of how to integrate national differences in the international regulatory arena. How will national consultation procedures relate to international decision making on chemical risks? How will differences in national risk assessment procedures be accommodated? How will the international regulatory system be integrated with different national styles of regulation and government? Presenting the experiences and insights of both people from within the worlds of risk assessment and management and from the field of Science Studies, this book forms a state of the art in the discussion on the Politics of Chemical Risk. By offering scenarios or sketches of a regulatory future, it points to the choices that can be made and the opportunities to be explored. As such, it offers an agenda for environmental and occupational scientists, policy makers and students of science and technology alike.

Science and Risk Regulation in International Law Jacqueline Peel, 2010-11-04. The regulation of risk is a preoccupation of contemporary global society and an increasingly important part of international law in areas ranging from environmental protection to international trade. This book examines a key aspect of international risk regulation: the way in which science and technical expertise are used in reaching decisions about how to assess and manage global risks. An interdisciplinary analysis is employed to illuminate how science has been used in international legal processes and global institutions such as the World Trade Organization. Case studies of risk regulation in international law are drawn from diverse fields including environmental treaty law, international trade law, food safety regulation and standard setting, biosafety and chemicals regulation. The book also addresses the important question of the most appropriate balance between science and non scientific inputs in different areas of international risk regulation.

Risk Regulation in the Internal Market Maria Weimer, 2019-03-19. This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by technological scientific complexity, uncertainty and societal contestation. It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental, public health, economic and social concerns in risk regulation. Weimer analyses the drawbacks of the EU approach to agricultural biotechnology, showing that its reductionism, i.e. the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability, has undermined both the legitimacy and effectiveness of EU regulation in this area. Resistance to this approach, however, has also triggered legal innovations, prompting us to re-think EU internal market law, including the way in which it manages the tensions between unity and diversity and between social and economic concerns. This text offers fresh and original insights into how far the EU can go in harmonizing regulatory approaches to risk. At the same time, it proposes new ways of re-thinking EU risk regulation to make it more responsive to different perspectives on risk and technology. A unique feature of this book is that it contributes to various strains of scholarship, including risk regulation, internal market law, public administration and studies of governance and regulation, as well as connecting these themes to broader debates about the

legitimacy of European integration and new ways of differentiated integration As a result it assists in re imagining the EU internal market and its regulation as a site of diversity
