International Contracts and National Economic Regulation: Dispute Resolution Through International Commercial Arbitration Mahmood Bagheri, 2000-12-06 The growth of national economic regulation and the process of globalisation increasingly expose international transactions to an array of regulations from different jurisdictions These developments often contribute to widespread international contractual failures when parties claim the incompatibility of their contractual obligations with regulatory laws The author challenges conventional means of dispute resolution and argues for an interdisciplinary approach whereby disciplines such as international economic law conflict of laws contract law and economic regulations are functionally united to resolve international and multifaceted regulatory disputes He identifies the normative foundation of contract law as an important determinant in this process contending that contract law is essentially neutral and underpinned by the concept of corrective justice while economic regulations are mainly prompted by distributive justice Applying this corrective distributive justice dichotomy to international contracts the author critically assesses major conflict of laws approaches such as proper law the Rome Convention and governmental interest analysis which could disregard either public interest or private rights The author taking these theories into account proposes an alternative two dimensional interest analysis approach He tests the viability of this approach with reference to arbitral awards and court decisions in various jurisdictions and concludes that it uniquely fits into the structure of international commercial arbitration In adopting this approach arbitrators would take into account both corrective and distributive justice and to the extent that corrective justice prevails would be able to avert a total failure of the contract **Encyclopedia of Business Ethics and Society** Robert W. Kolb, 2007-08-21 2008 Best Reference Library Journal As a field of study business ethics aims to specify the principles under which businesses must operate to behave ethically Thus business ethics focuses on such issues as those that have recently attracted so much public scrutiny executive compensation honesty in accounting transparency treatment

Private Regulation and Enforcement in the EU Madeleine de Cock Buning, Linda Senden, 2020-06-25

Globalisation and technological innovation have been fuelling the need for increasing levels of trust in private actors such as companies or special interest groups to regulate and enforce significant aspects of people's daily lives from environmental and social protection to the areas of food safety advertising and financial markets This book investigates the trust vested in private actors from the perspective of European citizens It answers the question of whether private actors live up to citizens' expectations or whether more should be done as to the safeguarding of citizens' interests Several cross-cutting studies explore how private regulation and enforcement are embedded in EU law The book offers an innovative approach to private regulation and enforcement by focusing on the specific EU context which unlike the national and transnational ones has not yet been widely explored This context merits a stand-alone analysis because of the unique normative framework of the EU as a particular polity itself but also in relation to its Member States With an overall analysis of the main aspects of private regulation and enforcement across different policy fields of the EU the book adds a missing tile to the mosaic of public-private governance studies

dialogue on risks a closer collaboration between decision makers and scientists and a better appraisal of the potential and limits of risk science The book also brings together in an accessible way much multidisciplinary knowledge which had been dispersed over many technical documents and specialist books The EU is in the front line of health safety and environmental risk management GMOs food safety hazardous chemicals climate change radiation hazards are just a few of the popular risk issues addressed by the EU through policy and regulatory measures The risk analysis paradigm including risk assessment management and communication has been at the core of the EU decision making for a long time already EU Institutions strive for a science based approach to risk management Nevertheless the dialogue and collaboration on risk issues between policy makers stakeholders and scientists are still difficult and the potential and limits of science in support of decision making as well as the basic concepts of risk analysis are not fully understood outside the narrow specialist circles

Better Business Regulation in a Risk Society Alberto Alemanno, Frank den Butter, André Nijssen, Jacopo Torriti, 2012-09-14 The premise of this volume is that business regulations are expected to grow in the near future as a consequence of the emergence of a world risk society Risks related to terrorism climate change and financial crises for example will penetrate all conditions of life Increasingly the decisions and actions of some bring about risks for many in this era of globalization Controlling these risks implies managing the world through high quality regulation with a particular emphasis on businesses and financial institutions Central to this approach is the argument that a major if not the primary aim of regulation is to internalize externalities or in a broader context to repair market failure Such repair can only be accomplished when the costs are smaller than the welfare gains Featuring contributions from researchers and policy analysts from the fields of economics management law sociology political science and environmental policy this book focuses on three major topics Social risks and business regulation Preconditions for better business regulation Theoretical issues related to better business regulation Collectively the authors demonstrate that the easier it is for regulated businesses to comply at the lowest costs possible without jeopardizing the related public goals the greater the degree of compliance When successful the net result is a balance of individual and collective net benefits and by further implication sustainable business practice and economic growth
