Rehabilitation Wojciech Radomski, 2002-10-28 In the last two decades the rapid deterioration of bridge structures has
 become a serious technical and economical problem in many countries including highly developed ones Therefore bridge
 rehabilitation has also become a very essential factor sometimes even a decisive one in contemporary bridge engineering The
 book covers in synthetic form nearly all the most important problems concerning bridge rehabilitation such as bridge
 superstructure and substructure the typical damage observed in bridges as well as the assessment and evaluation techniques
 of their technical condition The book is intended mainly for postgraduate university students Therefore all the problems are
 mostly presented in their physical chemical and technical as well as economical aspects The relevant requirements are
 treated as objective ones i.e. irrespective of the rules standards regulations or guidelines particular to any country This
 approach to the subject gives the book a more general character and therefore makes it a useful text for most civil
