Relativistic Reality: A Modern View James D Edmonds Jr,1997-12-18 It now appears that the old argument about Lorentz vs Galileo relativity is passing into history The Lorentz symmetry may soon become obsolete itself just as the Galileo symmetry did about 1900 The tremendous successes of QED represent real progress in our quest to understand nature The answer is not to go as most outsiders but to go forward beyond to new ideas and equations that will match nature even better than QED does This book shows us a new view of relativity and quantum equations It has new equations that extend Lorentz Maxwell and Dirac *Relativistic Reality* J. Kauffman,2012 More recently Khovanov introduced link homology as a generalization of the Jones polynomial to homology of chain complexes and Ozsvath and Szabo developed Heegaard Floer homology that lifts the Alexander polynomial These two significantly different theories are closely related and the dependencies are the object of intensive study These ideas mark the beginning of a new era in knot theory that includes relationships with four dimensional problems and the creation of new forms of algebraic topology relevant to knot theory The theory of skein modules is an older development also having its roots in Jones discovery Another significant and related development is the theory of virtual knots originated independently by Kauffman and by Goussarov Polyak and Viro in the 90s All these topics and their relationships are the subject of the survey papers in this book **Geometry, Language and Strategy** Gerald H. Thomas,2006 Geometry Language and Strategy is a way of looking at game theory or strategic decision making from a scientific perspective using standard equations from the fields of engineering and physics To better approximate reality it extends game theory beyond the two player set piece The book begins where former game theory literature ends OCo with multi person games on a world stage It encompasses many of the variables encountered in strategic planning using mathematics borrowed from physics and engineering rather than the

Yetter,2001 Almost since the advent of skein theoretic invariants of knots and links the Jones HOMFLY and Kauffman polynomials the important role of categories of tangles in the connection between low dimensional topology and quantum group theory has been recognized The rich categorical structures naturally arising from the considerations of cobordisms have suggested functorial views of topological field theory This book begins with a detailed exposition of the key ideas in the discovery of monoidal categories of tangles as central objects of study in low dimensional topology The focus then turns to the deformation theory of monoidal categories and the related deformation theory of monoidal functors which is a proper generalization of Gerstenhaber s deformation theory of associative algebras These serve as the building blocks for a deformation theory of braided monoidal categories which gives rise to sequences of Vassiliev invariants of framed links and clarify their interrelations **Scientific Essays In Honor Of H Pierre Noyes On The Occasion Of His 90th Birthday** Louis H Kauffman,John C Amson,2013-11-26 This book is a Festschrift for the 90th birthday of the physicist Pierre Noyes The book is a representative selection of papers on the topics that have been central to the meetings over the last three decades of ANPA the Alternative Natural Philosophy Association ANPA was founded by Pierre Noyes and his colleagues the philosopher linguist physicist Frederick Parker Rhodes the physicist Ted Bastin and the mathematicians Clive Kilmister John Amson Many of the topics in the book center on

the combinatorial hierarchy discovered by the originators of ANPA Other topics explore geometrical cosmological and biological aspects of those ideas and foundational aspects related to discrete physics and emergent quantum mechanics The book will be useful to readers interested in fundamental physics and particularly to readers looking for new and important viewpoints in Science that contain the seeds of futurity *Energy of Knots and Conformal Geometry* Jun O'Hara,2003 Energy of knots is a theory that was introduced to create a OC canonical configurationOCO of a knot OCo a beautiful knot which represents its knot type This book introduces several kinds of energies and studies the problem of whether or not there is a OC canonical configurationOCO of a knot in each knot type It also considers this problems in the context of conformal geometry The energies presented in the book are defined geometrically They measure the complexity of embeddings and have applications to physical knotting and unknotting through numerical experiments Contents In Search of the OC Optimal EmbeddingOCO of a Knot Energy Functional E On E 2 L p Norm Energy with Higher Index Numerical Experiments Stereo Pictures of E 2 Minimizers Energy of Knots in a Riemannian Manifold Physical Knot Energies Energy of Knots from a Conformal Geometric Viewpoint Preparation from Conformal Geometry The Space of Non Trivial Spheres of a Knot The Infinitesimal Cross Ratio The Conformal Sin Energy E sin c Measure of Non Trivial Spheres Appendices Generalization of the Gauss Formula for the Linking Number The 3 Tuple Map to the Set of Circles in S 3 Conformal Moduli of a Solid Torus Kirchhoff Elastica Open Problems and Dreams Readership Graduate students and researchers in geometry topology and numerical computational mathematics **Polynomial One-cocycles For Knots And Closed Braids** Thomas Fiedler,2019-08-27 Traditionally knot theory deals with diagrams of knots and the search of invariants of diagrams which are invariant under the well known Reidemeister moves This book goes one step beyond it gives a method to construct invariants for one parameter famillies of diagrams and which are invariant under higher Reidemeister moves Luckily knots in 3 space often called classical knots can be transformed into knots in the solid torus without loss of information It turns out that knots in the solid torus have a particular rich topological moduli space It contains many canonical loops to which the invariants for one parameter families can be applied in order to get a new sort of invariants for classical knots **Bit-string Physics** H. Pierre Noyes,J. C. van den Berg,2001 We could be on the threshold of a scientific revolution Quantum mechanics is based on unique finite and discrete events General relativity assumes a continuous curved space time Reconciling the two remains the most fundamental unsolved scientific problem left over from the last century The papers of H Pierre Noyes collected in this volume reflect one attempt to achieve that unification by replacing the continuum with the bit string events of computer science Three principles are used physics can determine whether two quantities are the same or different measurement can tell something from nothing this structure modeled by binary addition and multiplication can leave a historical record consisting of a growing universe of bit strings This book is specifically addressed to those interested in the foundations of particle physics relativity quantum mechanics physical cosmology and the philosophy of science Contents Non Locality in

Eiji Ogasa,2023-07-21 According to string theory our universe exists in a 10 or 11 dimensional space However the idea the space beyond 3 dimensions seems hard to grasp for beginners This book presents a way to understand four dimensional space and beyond with knots Beginners can see high dimensional space although they have not seen it With visual illustrations we present the manipulation of figures in high dimensional space examples of which are high dimensional knots and n spheres embedded in the n 2 sphere and generalize results on relations between local moves and knot invariants into high dimensional space Local moves on knots circles embedded in the 3 space are very important to research in knot theory It is well known that crossing changes are connected with the Alexander polynomial the Jones polynomial HOMFLYPT polynomial Khovanov homology Floer homology Khovanov homotopy type etc We show several results on relations between local moves on high dimensional knots and their invariants The following related topics are also introduced projections of knots knot products slice knots and slice links an open question can the Jones polynomial be defined for links in all 3 manifolds and Khovanov Lipshitz Sarkar stable homotopy type Slice knots exist in the 3 space but are much related to the 4 dimensional space The slice problem is connected with many exciting topics Khovanov homology Khovanv Lipshits Sarkar stable homotopy type gauge theory Floer homology etc Among them the Khovanov Lipshitz Sarkar stable homotopy type is one of the exciting new areas it is defined for links in the 3 sphere but it is a high dimensional CW complex in general Much of the book will be accessible to freshmen and sophomores with some basic knowledge of topology   Adex Theory: How The Ade Coxeter Graphs Unify Mathematics And Physics Saul-paul Sirag,2016-01-25 This book shows how the ADE Coxeter graphs unify at least 20 different types of mathematical structures These mathematical structures are of great utility in unified field theory string theory and other areas of physics   **Board Games: Throughout The History And Multidimensional Spaces** Jorma Kyppo,2019-07-08 In this richly illustrated book Dr Jorma Kypp explores the history of board games dating back to Ancient Egypt Mesopotamia India and China He provides a description of the evolution and various interpretations of chess Furthermore the book offers the study of the old Celtic and Viking board games and the old

Hawaiian board game Konane as well as a new hypothesis about the interpretation of the famous Cretan Phaistos Disk Descriptions of several chess variations including some highlights of the game theory and tiling in different dimensions are followed by a multidimensional symmetrical n person strategy game model based on chess Final chapter Concluding remarks offers the new generalizations of the Euler Poincare s Characteristic Pi and Fibonacci sequence **Hypercomplex Iterations** Yumei Dang,Louis H. Kauffman,Daniel J. Sandin,2002 Includes an interactive tour of the space of hypercomplex Julia sets and an educational mini documentary introducing fractals and hypercomplex geometry *Bios* Hector C. Sabelli,2005 This book focuses on a prototype of creative causal processes termed BIOS and how the concept can be applied to the physical world in medicine and in social science This book presents methods for identifying creative features in empirical data studies showing biotic patterns in physical biological and economic processes mathematical models of bipolar positive and negative feedback that generate biotic patterns These studies support the hypothesis that natural processes are creative not determined and causal not random and that bipolar feedback plays a major role in their evolution Simple processes precede coexist constitute and surround the complex systems they generate priority of the simple In turn complex processes feedback and transform simpler ones supremacy of the complex Quantum Invariants Tomotada Ohtsuki,2002 This book provides an extensive and self contained presentation of quantum and related invariants of knots and 3 manifolds Polynomial invariants of knots such as the Jones and Alexander polynomials are constructed as quantum invariants i e invariants derived from representations of quantum groups and from the monodromy of solutions to the Knizhnik Zamolodchikov equation With the introduction of the Kontsevich invariant and the theory of Vassiliev invariants the quantum invariants become well organized Quantum and perturbative invariants the LMO invariant and finite type invariants of 3 manifolds are discussed The Chern Simons field theory and the Wess Zumino Witten model are described as the physical background of the invariants
