**Complexity and Knowledge Management** Kurt A. Richardson, Andrew Tait, 2010-02-01 It seems as if attempts to use knowledge to understand and manage social networks are everywhere Millions if not billions of dollars are being spent in an attempt to derail terrorist networks with much of it being invested in making sense of massive data streams There is growing concern that much of this money is being squandered on approaches that will never deliver on their promises Our armed forces are being prepared to combat terrorist threats by the introduction of network centric approaches and digital battlefields basically attempts to provide warfighters with a complete picture of the battlespace However the experience of practitioners suggests that the data smog this creates is actually counterproductive From the arena of politics the recent invigorating battle between senators Clinton and Obama has thrown the spotlight on the deficiencies in political polling Economist 2008b Changes in the structure of the situation e.g. high turnouts have thrown the whole industry into chaos

Complexity is being discounted and the results are stark The conclusion formed in the media was that the situation was wildly unpredictable so anyone s to win and ended up having real consequences for the Democratic challenger in November 2008 Baldwin 2008 Turning to business we find that Soci t G n ale recently lost 7 2bn as the result of a single rogue trader making a series of bogus transactions amid turbulent markets in 2007 and 2008 There has been much speculation on what was known when it was known and who knew it In other words we have speculation that this is an example of the role of knowledge in the mismanagement of social networks with spectacular effect At a glance the problems highlighted above seem positively overwhelming Where do you start But start we must Simple cause and effect thinking doesn t seem to be able to cut the mustard There is broad agreement that even if the Kyoto targets were fully met on schedule by 2100 it would only delay the warming of the planet by six years Parry et al 1998 We need to utilize knowledge in new ways or maybe uncover insights from old ways It is hard to think of something more worthy of attention that the role of knowledge in the management of complex systems In Volume 4 of the Managing the Complex Series we have brought together seventeen essays from authors around the globe to explore the complex systems view of knowledge and its role in social networks Contributors explore such topics as the limitations to our knowledge of complex systems the transfer of knowledge from local to global levels collaborative knowledge generation decision making in complex multi stakeholder situations organizational learning and innovation all through the lens of the emerging field of complexity science The editors hope that this volume will give theorists further avenues to explore in their attempts to understand knowledge creation maintenance and distribution and also provide practitioners with new tools to apply in the complex and messy real world

**Mortal Minds** Gerald M. Woerlee, 2010-06-03 With its easy to read and personal style this book provides some intriguing new explanations of the physiology of death and the dying experience Susan Blackmore PhD Author of Dying to Live Dying is the last conscious experience undergone by each person But what do the dying experience In the last few decades a good deal of publicity has surrounded people who have been close to death and then reported intense experiences that seem to suggest a supernatural existence beyond death Does the conscious mind somehow continue to exist after the body has passed away Mortal Minds answers these questions Dr G M Woerlee explains how the normal functioning of the human body near death can generate beliefs in the reality of the supernatural and life after death An anesthesiologist with more than twenty years of hospital experience Dr Woerlee has been struck over the years by the similarities between the body s symptoms under anesthesia and its reactions near death Among the issues he addresses are the sensations of being disembodied that those near death often describe the perception that mind and body are separate components of existence whether there is such a thing as a soul the physical effects of decreased oxygen to the brain and the visions that the dying sometimes report from rapturous experiences of eternal peace to diabolical dreams While not dismissing near death experiences as mere hallucinations Dr Woerlee is also careful to point out that even powerful psychological impressions by themselves do not constitute scientific proof of life after

death Taking this balanced objective stance he succeeds in conveying a better understanding of the dying process and helping us all to realize the nature of these final experiences G M Woerlee Leiden The Netherlands is an anesthesiologist affiliated with the Rijnland Hospital in Leiderdorp The Netherlands and the author of two books on anesthesiology
