Sieve Methods Exponential Sums And Their Applications In Number Theory:

Sieve Methods, Exponential Sums, and Their Applications in Number Theory G. R. H. Greaves, G. Harman, M. N. Huxley, 1997 State of the art analytic number theory proceedings **Sieve Methods, Exponential Sums, and Their Applications in Number Theory** G. R. H. Greaves, G. Harman, M. N. Huxley, 1997-01-30 State of the art analytic number theory proceedings **Sieve Methods, Exponential Sums, and Their Applications in Number Theory** George Richard Herbert Greaves, 2014-05-14 State of the art analytic number theory proceedings *Sieves in Number Theory* George Greaves, 2013-03-09 Slightly more than 25 years ago the first text devoted entirely to sieve methods made its appearance rapidly to become a standard source and reference in the subject The book of H Halberstam and H E Richert had actually been conceived in the mid 1960 s The initial stimulus had been provided by the paper of W B Jurkat and Richert which determined the sifting limit for the linear sieve using a combination of the A2 method of A Selberg with combinatorial ideas which were in themselves of great importance and interest One of the declared objectives in writing their book was to place on record the sharpest form of what they called Selberg sieve theory available at the time At the same time combinatorial methods were not neglected and Halberstam and Richert included an account of the purely combinatorial method of Brun which they believed to be worthy of further examination Necessarily they included only a briefer mention of the development of these ideas due independently to J B Rosser and H Iwaniec that became generally available around 1971 These combinatorial notions have played a central part in subsequent developments most notably in the papers of Iwaniec and a further account may be thought to be timely There have also been some developments in the theory of the so called sieve with weights and an account of these will also be included in this book **Number Theory: Arithmetic In Shangri-la - Proceedings Of The 6th China-japan Seminar** Shigeru Kanemitsu, Hongze Li, Jianya Liu, 2013-02-20 This volume is based on the successful 6th China Japan Seminar on number theory that was held in Shanghai Jiao Tong University in August 2011 It is a compilation of survey papers as well as original works by distinguished researchers in their respective fields The topics range from traditional analytic number theory additive problems divisor problems Diophantine equations to elliptic curves and automorphic L functions It contains new developments in number theory and the topics complement the existing two volumes from the previous seminars which can be found in the same book series *A Higher-Dimensional Sieve Method* Harold G. Diamond, H. Halberstam, William F. Galway, 2008-10-16 Nearly a hundred years have passed since Viggo Brun invented his famous sieve and the use of sieve methods is constantly evolving As probability and combinatorics have penetrated the fabric of mathematical activity sieve methods have become more versatile and sophisticated and in recent years have played a part in some of the most spectacular mathematical discoveries Many arithmetical investigations encounter a combinatorial problem that requires a sieving argument and this tract offers a modern and reliable guide in such situations The theory of higher dimensional sieves is thoroughly explored and examples are provided throughout A

Mathematica software package for sieve theoretical calculations is provided on the authors website To further benefit readers the Appendix describes methods for computing sieve functions These methods are generally applicable to the computation of other functions used in analytic number theory The appendix also illustrates features of Mathematica which aid in the computation of such functions

Spectral Theory of the Riemann Zeta-Function Yoichi Motohashi, 1997-09-11 The Riemann zeta function is one of the most studied objects in mathematics and is of fundamental importance In this book based on his own research Professor Motohashi shows that the function is closely bound with automorphic forms and that many results from there can be woven with techniques and ideas from analytic number theory to yield new insights into and views of the zeta function itself The story starts with an elementary but unabridged treatment of the spectral resolution of the non Euclidean Laplacian and the trace formulas This is achieved by the use of standard tools from analysis rather than any heavy machinery forging a substantial aid for beginners in spectral theory as well These ideas are then utilized to unveil an image of the zeta function first perceived by the author revealing it to be the main gem of a necklace composed of all automorphic L functions In this book readers will find a detailed account of one of the most fascinating stories in the development of number theory namely the fusion of two main fields in mathematics that were previously studied separately

Prime-Detecting Sieves (LMS-33) Glyn Harman, 2020-05-26 This book seeks to describe the rapid development in recent decades of sieve methods able to detect prime numbers The subject began with Eratosthenes in antiquity took on new shape with Legendre s form of the sieve was substantially reworked by Ivan M Vinogradov and Yuri V Linnik but came into its own with Robert C Vaughan and important contributions from others notably Roger Heath Brown and Henryk Iwaniec Prime Detecting Sieves breaks new ground by bringing together several different types of problems that have been tackled with modern sieve methods and by discussing the ideas common to each in particular the use of Type I and Type II information No other book has undertaken such a systematic treatment of prime detecting sieves Among the many topics Glyn Harman covers are primes in short intervals the greatest prime factor of the sequence of shifted primes Goldbach numbers in short intervals the distribution of Gaussian primes and the recent work of John Friedlander and Iwaniec on primes that are a sum of a square and a fourth power and Heath Brown s work on primes represented as a cube plus twice a cube This book contains much that is accessible to beginning graduate students yet also provides insights that will benefit established researchers

Clifford Algebras and Spinors Pertti Lounesto, 2001-05-03 In this book Professor Lounesto offers a unique introduction to Clifford algebras and spinors The initial chapters could be read by undergraduates vectors complex numbers and quaternions are introduced with an eye on Clifford algebras The next chapters will also interest physicists and include treatments of the quantum mechanics of the electron electromagnetism and special relativity with a flavour of Clifford algebras This book also gives the first comprehensive survey of recent research on Clifford algebras A new classification of spinors is introduced based on bilinear covariants of physical observables This reveals a new class of spinors residing between the Weyl Majorana

and Dirac spinors Scalar products of spinors are classified by involutory anti automorphisms of Clifford algebras This leads to the chessboard of automorphism groups of scalar products of spinors On the analytic side Brauer Wall groups and Witt rings are discussed and Cauchy's integral formula is generalized to higher dimensions **Explicit Birational Geometry of 3-folds** Alessio Corti, Miles Reid, 2000-07-27 This volume first published in 2000 is an integrated suite of papers centred around applications of Mori theory to birational geometry
