James J. Gibson,2013-05-13 This is a book about how we see the environment around us its surfaces their layout and their colors and textures where we are in the environment whether or not we are moving and if we are where we are going what things are good for how to do things to thread a needle or drive an automobile or why things look as they do The basic assumption is that vision depends on the eye which is connected to the brain The author suggests that natural vision depends on the eyes in the head on a body supported by the ground the brain being only the central organ of a complete visual system When no constraints are put on the visual system people look around walk up to something interesting and move around it so as to see it from all sides and go from one vista to another That is natural vision and what this book is about *Theories of Visual Perception* Ian E. Gordon,2004-09-30 *Theories of Visual Perception* 3rd Edition provides clear critical accounts of several of the major approaches to the challenge of explaining how we see the world It explains why approaches to theories of visual perception differ so widely and places each theory into its historical and philosophical context Coverage ranges from early theories by such influential writers as Helmholtz and the Gestalt School to more recent work in the field of Artificial Intelligence This fully revised and expanded edition contains new material on the Minimum Principle in perception neural networks and cognitive brain imaging **Handbook of Perception and Action: Perception** Wolfgang Prinz,Bruce

Bridgeman,1995 This volume combines the classical fields of perception research with the major theoretical attitudes of today s research distinguishing between experience versus performance related approaches transformational versus interactional approaches and approaches that rely on the processing versus discovery of information Perception is separated into two parts The first part deals with basic processes and mechanisms and discusses early vision and later yet still basic vision The second covers complex achievements with accounts of perceptual constancies and the perception of patterns objects events and actions **Cognitive Approaches to Human Perception** Soledad Ballesteros,2014-02-25 Examining

the current state of the research in perception stressing contributions in visual information processing this volume provides

an original and timely account of recent results obtained in this and other related areas of cognitive psychology The scope of the book is intended to be broad featuring state of the art contributions from a number of outstanding researchers from different parts of the world the United States Europe and Australia The intention is to update areas of considerable theoretical implications and active experimental investigation in this broad field called the psychology of perception This volume s main purpose is to highlight from a cognitive position a selected number of important theoretical and empirical topics which deal with critical issues in perception and other high level related cognitive processes such as attention mental representation memory word naming and semantic categorization The studies reported were designed to answer many far reaching questions including Is the global precedence effect due to low or high level processing Can veridical and illusory perception be explained by the same theory What is the relationship between attention and perception Is perception direct or an inferential process What mechanisms are involved in picture and word naming and categorization How can word and picture processing be modeled The answers to these questions seek to unite theoretical perspectives on very important areas of cognitive psychology such as attention perception representation of visual objects and words and human memory
