of mathematics combinatorics also encompasses some gen eral tools that can be learned and then applied to various problems Matroid theory is one of these tools 2 Within combinatorics the relative importance of algorithms has in creased with the spread of computers Classical analysis did not even consider problems where only a finite number of cases were to be studied Now such problems are not only considered but their complexity is often analyzed in con siderable detail Some questions of this type for example the determination of when the so called greedy algorithm is optimal cannot even be answered without matroidal tools *Advances in Computers* ,1961-01-01 Advances in Computers **Network Optimization Problems: Algorithms, Applications And Complexity** Ding-zhu Du,Panos M Pardalos,1993-04-27 In the past few decades there has been a large amount of work on algorithms for linear network flow problems special classes of network problems such as assignment problems linear and quadratic Steiner tree problem topology network design and nonconvex cost network flow problems Network optimization problems find numerous applications in transportation in communication network design in production and inventory planning in facilities location and allocation and in VLSI design The purpose of this book is to cover a spectrum of recent developments in network optimization problems from linear networks to general nonconvex network flow problems a Combinatorial Geometries Neil White,1987-09-24 This book is a continuation of Theory of Matroids also edited by Neil White and again consists of a series of related surveys that have been contributed by authorities in the area The volume begins with three chapters on coordinatisations followed by one on matching theory The next two deal with transversal and simplicial matroids These are followed by studies of the important matroid invariants The final chapter deals with matroids in combinatorial optimisation a topic of much current interest The whole volume has been carefully edited to ensure a uniform style and notation throughout and to make a work that can be used as a reference or as an introductory textbook for graduate students or non specialists *System Modelling and Optimization* J.
