Mathematical Logic And Foundations Of Set Theory:

Foundations of Set Theory A.A. Fraenkel, Y. Bar-Hillel, A. Levy, 1973-12-01 Foundations of Set Theory discusses the reconstruction undergone by set theory in the hands of Brouwer Russell and Zermelo Only in the axiomatic foundations however have there been such extensive almost revolutionary developments This book tries to avoid a detailed discussion of those topics which would have required heavy technical machinery while describing the major results obtained in their treatment if these results could be stated in relatively non technical terms This book comprises five chapters and begins with a discussion of the antinomies that led to the reconstruction of set theory as it was known before It then moves to the axiomatic foundations of set theory including a discussion of the basic notions of equality and extensionality and axioms of comprehension and infinity The next chapters discuss type theoretical approaches including the ideal calculus the theory of types and Quine s mathematical logic and new foundations intuitionistic conceptions of mathematics and its constructive character and metamathematical and semantical approaches such as the Hilbert program This book will be of interest to mathematicians logicians and statisticians SET THEORY AND FOUNDATIONS OF MATHEMATICS DOUGLAS. Kunen, 2014-06-28 Studies in Logic and the Foundations of Mathematics Volume 102 Set Theory An Introduction to Independence Proofs offers an introduction to relative consistency proofs in axiomatic set theory including combinatorics sets trees and forcing The book first tackles the foundations of set theory and infinitary combinatorics Discussions focus on the Suslin problem Martin s axiom almost disjoint and quasi disjoint

sets trees extensionality and comprehension relations functions and well ordering ordinals cardinals and real numbers The manuscript then ponders on well founded sets and easy consistency proofs including relativization absoluteness reflection theorems properties of well founded sets and induction and recursion on well founded relations The publication examines constructible sets forcing and iterated forcing Topics include Easton forcing general iterated forcing Cohen model forcing with partial functions of larger cardinality forcing with finite partial functions and general extensions The manuscript is a dependable source of information for mathematicians and researchers interested in set theory

Mathematical Logic and Foundations of Set Theory Yehoshua Bar-Hillel,1970 *The Foundations of Mathematics* Kenneth Kunen,2009 Mathematical logic grew out of philosophical questions regarding the foundations of mathematics but logic has now outgrown its philosophical roots and has become an integral part of mathematics in general This book is designed for students who plan to specialize in logic as well as for those who are interested in the applications of logic to other areas of mathematics Used as a text it could form the basis of a beginning graduate level course There are three main chapters Set Theory Model Theory and Recursion Theory The Set Theory chapter describes the set theoretic foundations of all of mathematics based on the ZFC axioms It also covers technical results about the Axiom of Choice well orderings and the theory of uncountable cardinals The Model Theory chapter discusses predicate logic and formal proofs and covers the Completeness Compactness and Lowenheim Skolem Theorems elementary submodels model completeness and applications

to algebra This chapter also continues the foundational issues begun in the set theory chapter Mathematics can now be viewed as formal proofs from ZFC Also model theory leads to models of set theory This includes a discussion of absoluteness and an analysis of models such as H and R The Recursion Theory chapter develops some basic facts about computable functions and uses them to prove a number of results of foundational importance in particular Church's theorem on the undecidability of logical consequence the incompleteness theorems of Gödel and Tarski's theorem on the non definability of truth
