Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems Mario Lucertini,Ana Millàn Gasca,Fernando Nicolò,2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLÒ 1 Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Age This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20 century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity

Modelling, Simulation and Optimization of Industrial Fixed Bed Catalytic Reactors S.S.E.H. Elnashaie,2022-01-26 In the last two decades impressive advances have been made toward the understanding and quantitative description of the kinetics Despite these advances however the use of mathematical modelling of gas solid catalytic reactors in industry is still limited By consolidating progress in the understanding of catalytic processes this book applies these fundamental advances to the development of models for design simulation and optimization of industrial reactors Paying particular attention to the verification of the developed models against industrial data these models are used to optimize the performance of many practical reactor cases Using a systems approach for the development of the different components and the resulting overall models the book is easy to read and gives an insight into the behaviour of these complex industrial systems In addition the practical relevance of bifurcation instability and chaos to industrial

reactors is briefly discussed

Introduction to Differential and Difference Equations through Modeling William P. Fox, Robert E. Burks, Jr., 2025-07-09 This book presents an opportunity to learn difference and differential equations through a modeling first approach The text is meant as an introduction to those equations and not as a text only for modeling courses No previous exposure to these equations is expected Modeling in Introduction to Differential and Difference Equations through

Modeling is presented as the vehicle for learning difference and differential equations Although the topics in difference and differential equations are consistent with those in other textbooks this approach differs The presentation starts with a model or several models and offers the solution with minor discussions Then methods to obtain those solutions are presented and show these same models and others again in more detail This approach is designed to focus on the use of difference and differential equations to solve real world problems and to learn not only these primary topics but how to apply these through modeling The authors begin with a review of matrix algebra then an introduction to modeling The text progresses to discrete dynamical systems and then to the standard organization of most differential equation texts making the alignment with a current syllabus easier Technology is a significant modeling component Excel Python and Maple are presented as methods to solving the models This material has been class tested at the US Military Academy at West Point Marian University the College of William Mary and the Naval Postgraduate School with great success
