Mathematical Modeling In Nutrition And The Health Sciences:

Mathematical Modeling in Nutrition and the Health Sciences Janet A. Novotny, Michael H. Green, Ray C. Boston, 2012-12-06 This volume is the proceedings of the 7th Mathematical Modeling in Experimental Nutrition Conference held at Penn State University July 29 until August 1 2000 The book addresses the determination of optimal intakes of nutrients and food components to provide lifelong health and reduce incidence of disease Mathematical modelling provides a means of rigorously defining the functions of a system and using a variety of conditions to stimulate responses This volume presents the newest advances in modelling and related experimental techniques required to meet the new challenges currently facing nutrition and biological science

Mathematical Modeling in Experimental Nutrition Andrew J. Clifford, Hans-Georg Müller, 2013-11-21 Nutrients have been recognized as essential for maximum growth successful reproduction and infection prevention since the 1940s since that time the lion's share of nutrient research has focused on defining their role in these processes Around 1990 however a major shift began in the way that researchers viewed some nutrients particularly the vitamins This shift was motivated by the discovery that modest declines in vitamin nutritional status are associated with an increased risk of ill health and disease such as neural tube defects heart disease and cancer especially in those populations or individuals who are genetically predisposed In an effort to expand upon this new understanding of nutrient action nutritionists are increasingly turning their focus to the mathematical modeling of nutrient kinetic data The availability of suitably tagged isotope nutrients such as B carotene vitamin A folate among others sensitive analytical methods to trace them in humans mass spectrometry and accelerator mass spectrometry and powerful software capable of solving and manipulating differential equations efficiently and accurately has allowed researchers to construct mathematical models aimed at characterizing the dynamic and kinetic behavior of key nutrients in vivo in humans at an unparalleled level of detail

Vitamin A, 2011-09-21 First published in 1943 Vitamins and Hormones is the longest running serial published by Academic Press In the early days of the serial the subjects of vitamins and hormones were quite distinct The Editorial Board now reflects expertise in the field of hormone action vitamin action X ray crystal structure physiology and enzyme mechanisms Under the capable and qualified editorial leadership of Dr Gerald Litwack Vitamins and Hormones continues to publish cutting edge reviews of interest to endocrinologists biochemists nutritionists pharmacologists cell biologists and molecular biologists Others interested in the structure and function of biologically active molecules like hormones and vitamins will as always turn to this series for comprehensive reviews by leading contributors to this and related disciplines

Computational Mathematics and Modelling for Diabetes Abdesslam Boutayeb, Mohamed E.N. Lamlili, 2025-06-29 This book is a theoretical and pragmatic tool that applies mathematical modelling in understanding and managing diabetes and related complications such as diabetes predisposition diabetes onset regular glycaemic monitoring glycated haemoglobin HbA1c diabetes homeostasis gestational diabetes and other associated diseases and conditions Chapters in the book provide

mathematical models dealing with the dynamics of insulin glucose the evolution from pre diabetes to diabetes without and with complications gestational diabetes and the association between diabetes and benign prostatic hyperplasia It also applies new methods such as data mining machine learning and deep learning By offering pragmatic examples and comprehensive reviews on mathematical models used for diabetes this book is useful for advanced researchers academic teachers students scientists and high pharmaceutical industry executives willing to start modelling

Energy and protein metabolism and nutrition G. Matteo Crovetto, 2023-09-04 Energy and Protein Metabolism and Nutrition is of increasing importance as greater efficiency and health benefits are sought in feed for animal production Top scientists from around the world have collaborated in this book to exchange expertise and knowledge on the latest developments in the field The topics range from tissue metabolism and regulation mechanisms to practical aspects of energy and protein nutrition and feeding A better and deeper understanding of nutrient metabolism and nutrition can only be achieved by integrating the outcomes of scientists researching different aspects of this topic In doing this practical outcomes are sought for the direct benefit of producers and consumers Special topics such as the links between energy protein metabolism and nutrition regarding food quality nutrigenomics environmental sustainability and animal welfare in relation to the topic are all explored This book is a valuable resource to all researchers and industry professionals who concern themselves with animal nutrition

Dynamic Modeling in the Health Sciences James L. Hargrove, 2012-12-06 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity The books in this series will promote this revolution in systems thinking by integrating skills of numeracy and techniques of dynamic modeling into a variety of disciplines The unifying theme across the series will be the power and Simplicity of the model building process and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them Modeling Dynamic Systems does not endorse any particular modeling paradigm or software Rather the volumes in the series will emphasize simplicity of learning expressive power and the speed of execution as priorities that will facilitate deeper system understanding

Handbook of Vitamins Robert B. Rucker, Janos Zemleni, John W. Suttie, Donald B. McCormick, 2007-06-08 Thoroughly revised and updated Handbook of Vitamins highlights the recent research in vitamins and gene expression vitamin dependent genes and vitamin effect on DNA stability This fourth edition includes new chapters on vitamin dependent modification of chromatin analysis of vitamin metabolism using accelerated mass spectrometry and diet

Modelling Nutrient Digestion and Utilisation in Farm Animals D. Sauvant, J. van Milgen, P. Faverdin, N. Friggens, 2011-05-02 For more than 30 years modelling has been an important method

for integrating in a flexible comprehensive and widely applicable way basic knowledge and biological concepts on digestion and metabolism in farm animals The purpose of this book is to present the state of art in this area The chapters are written by leading teams and researchers in this field of study mainly from Europe North America and Australasia Considerable progress has been made in topics dealing with modelling methods feeding behaviour digestion and metabolic processes in ruminants and monogastric animals This progress is clearly illustrated by the emergence of a new paradigm in animal nutrition which has moved from the aim to cover the requirements of the animal to explaining and predicting the responses of the animals to diets e g productivity and efficiency impact on quality of products environmental aspects health and well being In this book several chapters illustrate that through empirical models meta analysis is an efficient tool to synthesize information gathered over recent decades In addition compared with other books on modelling farm animal nutrition two new aspects received particular attention expanding knowledge of the individual animal to understanding the functioning and management of herds and the consideration of the environmental impact of animal production This book is a valuable source of information for researchers nutritionists advisors and graduate students who want to have up to date and concise information on mathematical modelling applied to farm animals

Del Grosso,Lajpat R. Ahuja,William J. Parton,2020-01-22 Crop livestock and forestry productions systems are important sources and sinks of greenhouses gases but estimates of the magnitude of gas fluxes are more uncertain than those for other economic sectors such as transportation and electricity generation Recent improvements in process level understanding modeling software and observational data used for model testing have increased the accuracy of model predictions but substantial uncertainty remains particularly regarding the potential for different management practices to mitigate emissions The chapters in this volume demonstrate that both simple methods and complex models have strengths and limitations depending on stake holder interest scale of application and other factors Future improvement can be facilitated by organizing model input and testing data into web accessible databases and by making model algorithms more available and transparent *Hearings, Reports and Prints of the Senate Select Committee on Nutrition and Human Needs* United States.
