Lives in Science Joseph C. Hermanowicz, 2010-04-15 What can we learn when we follow people over the years and across the course of their professional lives Joseph C Hermanowicz asks this question specifically about scientists and answers it here by tracking fifty five physicists through different stages of their careers at a variety of universities across the country He explores these scientists shifting perceptions of their jobs to uncover the meanings they invest in their work when and where they find satisfaction how they succeed and fail and how the rhythms of their work change as they age His candid interviews with his

subjects meanwhile shed light on the ways career goals are and are not met on the frustrations of the academic profession and on how one deals with the boredom and stagnation that can set in once one is established An in depth study of American higher education professionals eloquently told through their own words Hermanowicz s keen analysis of how institutions shape careers will appeal to anyone interested in life in academia

The Stars Are Not Enough Joseph C. Hermanowicz,1998-10-15 Based on sixty interviews with physicists at universities across the United States The Stars are Not Enough offers a detailed and intimate account of the worlds in which scientists work Joseph C Hermanowicz looks at a range of scientists from young graduate students to older professionals well into their careers The result is a colorful portrait of a profession and its diverse cast of characters These deeply personal narratives reveal dreams of fame and glory in which scientists confess their ambitions of becoming the next Newton or Einstein However these scientists also discuss the meaning of success and failure We hear their stories of aspiration and anxiety disappointment and tragedy hope and achievement we are privy to their doubts and to what they consider to be their limitations and weaknesses As the scientists age in their professions the specter of failure often visits them and they have to accept something less than scientific immortality or even the Nobel Prize Ultimately these stories give us more than an inside look at the details of careers in science they also examine ambition by uncovering the forces that drive people in their professions and by describing how these forces persist or fade over time Ambition for greatness often ignites a career and often sustains it Yet as Hermanowicz s study reveals greatness eludes nearly all people in their heroic quests for extraordinary achievement The Stars Are Not Enough offers a fascinating account that will appeal to anyone interested in how people s dreams blossom and evolve
