Statistics of Income, 1990 **Preparing Teachers for National Board Certification** Kathleen Anderson Steeves, Barbara C. Browne, 2000-09-11. This practical book presents a comprehensive blueprint for preparing teachers to achieve National Board for Professional Teaching Standards (NBPTS) certification. An outgrowth of the authors' more than five years of experience working with teacher candidates, the approach described here enlists the collaboration of both university educators and professional staff development personnel. The book includes a detailed outline of a seminar to introduce teachers to the NBPTS process, complete with written samples and reproducible overhead transparency masters. Also featured are chapters contributed by Board-Certified Teachers who share portfolio samples and activities in four certification areas. Supported by research-proven best practices in professional education, the book includes extensive reference lists and helpful hints for facilitators. **Code of Federal Regulations**, 2005 The Practice of Constructivism in Science

Education Kenneth G. Tobin, 2012-11-12 This volume provides a needed elaboration of theories and potential applications of constructivism in science education. Although the term constructivism is used widely, there has been a dearth of materials to guide science educators concerning the potential of constructivism to influence what is done in the field. In fact, there has been a tendency for constructivism to be viewed as a method that can be used in a classroom. This view tends to diminish the power of constructivism as a way of thinking about education and in particular about science education. The chapters in this book address the need to document the theoretical roots of constructivism and to describe how practitioners have applied constructivist oriented beliefs in the practice of K-12 teaching of science and mathematics as well as teacher education. Not only does this book contain different theoretical perspectives on constructivism but it also features a chapter that critiques constructivism as an epistemology. Specific topics covered include cooperative learning, the negotiation of meaning, problem-centered learning, social construction of knowledge, science in culturally diverse settings, curriculum planning and implementation, and instructional technology. Issues associated with the preparation and enhancement of science teachers and the reform of science education are also explored.
