- 1) The table shows the amount of rainfall in London recorded over a 7 day period measured to the nearest 2.5 mm. Draw a line graph to represent the data.

Day	Mon	Tues	Wed	Thurs	Fri	Sat	Sun
Rainfall (mm)	10	7.5	12.5	17.5	0	0	2.5

- 2) The line graph shows the temperature in two towns over a 12 hour period.

- What was the difference in temperature between 8.00 am and 10.00 am in Brixham?
- Which two consecutive hours saw the largest change temperature in Dudley?
- Write down the range in temperature over the 12 hour period for each city.
- Give one reason why a line graph is a useful way to represent this data.

Encyclopaedia of Mathematics (set) Michiel Hazewinkel, 1994-02-28 The Encyclopaedia of Mathematics is the most up to date authoritative and comprehensive English language work of reference in mathematics which exists today With over 7 000 articles from A integral to Zygmund Class of Functions supplemented with a wealth of complementary information and an index volume providing thorough cross referencing of entries of related interest the Encyclopaedia of Mathematics offers an immediate source of reference to mathematical definitions concepts explanations surveys examples terminology and methods The depth and breadth of content and the straightforward careful presentation of the information with the emphasis on accessibility makes the Encyclopaedia of Mathematics an immensely useful tool for all mathematicians and other scientists who use or are confronted by mathematics in their work The Encyclopaedia of

Mathematics provides without doubt a reference source of mathematical knowledge which is unsurpassed in value and usefulness. It can be highly recommended for use in libraries of universities, research institutes, colleges, and even schools.

A Beginner's Guide to Discrete Mathematics W. D. Wallis, 2003. This introduction to discrete mathematics is aimed primarily at undergraduates in mathematics and computer science at the freshmen and sophomore levels. The text has a distinctly applied orientation and begins with a survey of number systems and elementary set theory. Included are discussions of scientific notation and the representation of numbers in computers. Lists are presented as an example of data structures. An introduction to counting includes the Binomial Theorem and mathematical induction which serves as a starting point for a brief study of recursion. The basics of probability theory are then covered. Graph study is discussed including Euler and Hamilton cycles and trees. This is a vehicle for some easy proofs as well as serving as another example of a data structure. Matrices and vectors are then defined. The book concludes with an introduction to cryptography including the RSA cryptosystem together with the necessary elementary number theory e.g. Euclidean algorithm, Fermat's Little Theorem. Good examples occur throughout. At the end of every section there are two problem sets of equal difficulty. However, solutions are only given to the first set. References and index conclude the work. A math course at the college level is required to handle this text. College algebra would be the most helpful.

*Nuclear Science Abstracts*, 1972-03. Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01. This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results, and techniques.
