Tensor Calculus with Object-Oriented Matrices for Numerical Methods in Mechanics and Engineering Udo F. Meissner, 2024-10-18 The intension of the book is to synthesize classical matrix and tensor methods with object oriented software techniques and efficient matrix methods for numerical algorithms The aim is to establish a coherent methodological framework through which the tensor based modeling of physical phenomena can be seamlessly applied in numerical algorithms without encountering methodological inconsistencies across different sub areas like indexed notation of tensors and two dimensional matrix algebra in symbolic notation The key to an effective solution lies in object oriented numerical structures and software design The author presents a coherent integration of tensor based theory through multi dimensional matrix calculus to object oriented numeric classes and methods for adequate simulations The index based tensor and matrix

notation and the object oriented overloading of standard operators in C offers an innovative means to define comparable matrix operations for processing matrix objects of higher order Typical applications demonstrate the advantages of this unique integration

Tensor Algebra and Tensor Analysis for Engineers Mikhail Itskov, 2007-05-04 There is a large gap between engineering courses in tensor algebra on one hand and the treatment of linear transformations within classical linear algebra on the other This book addresses primarily engineering students with some initial knowledge of matrix algebra Thereby mathematical formalism is applied as far as it is absolutely necessary Numerous exercises provided in the book are accompanied by solutions enabling autonomous study The last chapters deal with modern developments in the theory of isotropic and anisotropic tensor functions and their applications to continuum mechanics and might therefore be of high interest for PhD students and scientists working in this area

Tensor Spaces and Numerical Tensor Calculus Wolfgang Hackbusch, 2012-02-23 Special numerical techniques are already needed to deal with $n \times n$ matrices for large n Tensor data are of size $n \times n \times \dots \times n$ where n exceeds the computer memory by far They appear for problems of high spatial dimensions Since standard methods fail a particular tensor calculus is needed to treat such problems The monograph describes the methods how tensors can be practically treated and how numerical operations can be performed Applications are problems from quantum chemistry approximation of multivariate functions solution of pde e g with stochastic coefficients etc
