[Binge Drinking in the Adolescent and Young Brain, Volume II](#) Eduardo Lopez-Caneda, Salvatore Campanelle, Séverine Lannoy, Carina Carbia, 2024-01-23 This Research Topic is the second volume of Research Topic Binge Drinking in the Adolescent and Young Brain Please see the first volume here Binge drinking BD also known as heavy episodic drinking or college drinking is a highly prevalent pattern in most Western countries characterized by the intake of large amounts of alcohol in a short time followed by periods of abstinence This excessive pattern of alcohol use is a regular practice in around a third of European and American youth The high prevalence of BD at this age is of particular concern since adolescents are

in a period of special vulnerability to neurotoxic effects of alcohol mainly due to the structural and functional changes going on in the brain throughout this key developmental stage As showed in the first volume of the Research Topic evidence gathered during the last decade from animal and human studies seems to point out multiple brain anomalies associated with BD at different levels biochemical structural functional but also cognitive and affective In this Second Volume our aim is to bring together the most recent studies namely original research and systematic or critical reviews which provide a comprehensive approach regarding the effects of BD on the adolescent and young brain Thus we aim to include manuscripts from different domains preclinical and clinical research perspectives genetic behavioral neuropsychological clinical psychology psychophysiology neuroimaging etc and methods behavioural biochemical EEG MEG MRI etc Likewise we welcome submissions aimed at examining the effects of BD beyond the brain personality dimensions polygenic risk peripheral inflammation cortisol response gut microbiome etc and approaches focused on reducing BD such as cognitive training and or neuromodulation by tDCS TMS etc
