Oxygen And The Conversion Of Future Feedstocks:

Oxygen and the Conversion of Future Feedstocks BOC Gases Division Trust, 1984 *Oxygen and the Conversion of Future Feedstocks* BOC Gases Division Trust, Royal Society of Chemistry (Great Britain), 1984 **Methanol: The Basic Chemical and Energy Feedstock of the Future** Martin Bertau, Heribert Offermanns, Ludolf Plass, Friedrich Schmidt, Hans-Jürgen Wernicke, 2014-02-18 Methanol The Chemical and Energy Feedstock of the Future offers a visionary yet unbiased view of methanol technology Based on the groundbreaking 1986 publication Methanol by Friedrich Asinger this book includes contributions by more than 40 experts from industry and academia The authors and editors provide a comprehensive exposition of methanol chemistry and technology which is useful for a wide variety of scientists working in chemistry and energy related industries as well as academic researchers and even decision makers and organisations concerned with the future of chemical and energy feedstocks **The Refinery of the Future** James G. Speight, 2010-12-21 As feedstocks to refineries change there must be an accompanying change in refinery technology This means a movement from conventional means of refining heavy feedstocks using typically coking technologies to more innovative processes that will coax the last drips of liquid fuels from the feedstock This book presents the evolution of refinery processes during the last century and as well as the means by which refinery processes will evolve during the next three to five decades Chapters contain material relevant to 1 comparisons of current feedstocks with heavy oil and bio feedstocks 2 evolution of refineries since the 1950s 3 properties and refinability of heavy oil and bio feedstocks 4 thermal processes vs hydroprocesses and 5 evolution of products to match the environmental market Process innovations that have influenced refinery processing over the past three decades are presented as well as the relevant patents that have the potential for incorporation into future refineries Comparison of current feedstocks with heavy oil and bio feedstocks Evolution of refineries over the past three decades Properties and refinability of heavy oil and bio feedstocks Thermal processes vs Hydroprocesses Evolution of products to match the environmental market Investigates the engineering and plant design challenges presented by heavy oil and bio feedstocks Explores the legislative and regulatory climate including increasingly stringent environmental requirements Examines the trade offs of thermal processes vs hydroprocesses New and Future Developments in Catalysis Steven L Suib, 2013-07-17 New and Future Developments in Catalysis is a package of seven books that compile the latest ideas concerning alternate and renewable energy sources and the role that catalysis plays in converting new renewable feedstock into biofuels and biochemicals Both homogeneous and heterogeneous catalysts and catalytic processes will be discussed in a unified and comprehensive approach There will be extensive cross referencing within all volumes The various sources of environmental pollution are the theme of this volume The volume lists all current environmentally friendly catalytic chemical processes used for environmental remediation and critically compares their economic viability Offers in depth coverage of all catalytic topics of current interest and outlines future challenges and research areas A clear and visual

description of all parameters and conditions enabling the reader to draw conclusions for a particular case Outlines the catalytic processes applicable to energy generation and design of green processes
