## **Regression Periods In Human Infancy:**

Regression Periods in Human infancy Mikael Heimann, Frans X. Plooij, 2003-10-17 Regression periods play a central role in the psychological development of the human baby Studies of infants have identified 10 periods of regression or a return to a high frequency of mother infant contact within the first 20 months of life These periods of emotional insecurity in the child signal forthcoming periods of developmental advance and the emergence of an array of new skills as a consequence of parent infant conflict over body contact and the renegotiation of old privileges Although the basic idea in this book is an old one the authors believe that regression periods deserve further study and have identified four questions of central importance today Can the phenomenon of regression periods as found by Dutch researchers in 1992 be replicated in other countries and cultures What environmental conditions have an effect on these regression periods and how Are there physical conditions in infants that show a non linear distribution over age similar to regression periods Have brain changes been detected since the review of Fischer Rose 1994 at other ages than the six reported by them and if yes how do these relate to the ages at which regression periods are found Forming the core of this book the replication studies performed in Sweden Spain and England provide support that regression periods are a reliable phenomenon and should be dealt with accordingly whenever developmental processes in infancy are discussed

**Phenomenology of the Newborn** Michael van Manen, 2018-11-21 Many children spend their first days weeks and sometimes months in a neonatal intensive care unit as a consequence of prematurity congenital anomalies or birth complications Their medical needs are thoughtfully appraised and attended to yet some questions are rarely asked What experiences do these newborns have What experiences are we giving them How can we and do we understand what their lives are like What are the interventions and actions of medical care actually like for them Michael van Manen explores the experiential life of newborn infants with particular consideration for those newborns who require medical care Drawing on contemporary research findings from physiology psychology biology and other disciplines he offers phenomenological insights and raises thought provoking questions as to how we ought to understand and care for such young children In our contemporary world it is often the experiences of inception of first contact with those who seem most distant foreign or even alien that we need to try to apprehend and understand The inceptual lives of newborn infants challenges us to explore those experiences phenomenologically to investigate the originary meanings of early life experiences Phenomenology of the Newborn is an essential text for researchers seeking to employ phenomenology for the study of neonatal life and related concerns that may seem inaccessible to other more traditional qualitative and quantitative methods

*Contexts for Young Child Flourishing* Darcia Narváez, 2016 Contexts for Young Child Flourishing uses an evolutionary systems framing to address the conditions and contexts for child development and thriving Contributors focus on flourishing optimizing individual physiological psychological emotional and communal social community functioning

The Cambridge Handbook of the Imagination Anna Abraham, 2020-06-18 The human imagination manifests in countless different forms We imagine the possible and the impossible How do we do this so effortlessly Why did the capacity for imagination evolve and manifest with undeniably manifold complexity uniquely in human beings This handbook reflects on such questions by collecting perspectives on imagination from leading experts It showcases a rich and detailed analysis on how the imagination is understood across several disciplines of study including anthropology archaeology medicine neuroscience psychology philosophy and the arts An integrated theoretical empirical applied picture of the field is presented which stands to inform researchers students and practitioners about the issues of relevance across the board when considering the imagination With each chapter the nature of human imagination is examined what it entails how it evolved and why it singularly defines us as a species

*Evolution, Early Experience and Human Development* Darcia Narváez, 2012-11-29 The field of cognitive psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before In contrast psychological problems such as ADHD autism anxiety and depression

are on the rise as are medical conditions such as diabetes obesity and autoimmune disorders Why in this era of unprecedented scientific self knowledge does there seem to be so much uncertainty about what human beings need for optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based argument regarding human mammalian needs for optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development

**Child Development** Jean A. Mercer, 2018-04-09 Understanding child development is essential to ensuring a full and rounded psychological grounding but given the complex nature of the topic it can be a real challenge Child Development Concepts and Theories takes a step back to focus just on the key concepts of child development that all students must learn With this book their first encounters with theories and their applications will mean that they can move on with a firm foundation in child development Central to this is understanding how these theories or concepts are applied in the real world and how psychologists engage with them in research This book gives clear and detailed examples to bring the subject to life Each chapter features case studies that run throughout the chapter and develop as the students own understanding does Written for undergraduates the book will become essential to any student wanting a key to unlock the world of child development Jean Mercer is Professor Emerita of Psychology at Stockton University New Jersey and writes a blog Childmyths
