Chemical Ecology and Phytochemistry of Forest Ecosystems

J.T. Romeo, 2005-07-26 The Phytochemical Society of North America held its forty fourth annual meeting in Ottawa Ontario Canada from July 24-28 2004. This year's meeting was hosted by the University of Ottawa and the Canadian Forest Service Great Lakes Forestry Centre and was held jointly with the International Society of Chemical Ecology. All of the chapters in this volume are based on papers presented in the symposium entitled Chemical Ecology and Phytochemistry of Forest Ecosystems. The Symposium Committee Mamdouh Abou Zaid John T. Arnason Vincenzo deLuca Constance Nozzolillo and Bernard Philogene assembled an international group of phytochemists and chemical ecologists working primarily in northern forest ecosystems. It was a unique interdisciplinary forum of scientists working on the cutting edge in their respective fields. While most of these scientists defy the traditional labels we are accustomed to they brought to the symposium expertise in phytochemistry insect biochemistry molecular biology genomics and proteomics botany entomology microbiology mathematics and ecological modeling. A collection of papers presented at the 44th Annual meeting of the Phytochemical Society of North America. Representation from a unique interdisciplinary forum of scientists. Includes discussions on new genomics research in forest health.

Phytochemistry in the Genomics and Post-Genomics Eras

John Romeo, R.A. Dixon, 2002-06-20 This monograph series is commissioned by the Phytochemical Society of North America (PSNA). The volumes in this series contain articles on developing topics of interest to scientists students and individuals interested in recent developments in the biochemistry chemistry and molecular biology of plants. Volume 36 centers on the role of phytochemistry in the rapid developments in biology brought about by the application of large scale genomics approaches. Several functional genomic approaches discussed in this volume address plant gene function on a large scale. Plants are combinatorial chemists par excellence and understanding the principles that relate enzyme structure to function will open up unlimited possibilities for the rational design of new enzymes to generate novel biologically active natural products. Knowledge of the molecular genetics of plant natural product pathways will also facilitate the engineering of these pathways for plant improvement and human benefit. Phytochemistry truly has a great future in the genomics and post genomics eras.

Secondary Metabolism in Model Systems John Romeo, 2004-07-14 The chapters presented in Secondary Metabolism in Model Systems are a

microcosm of what the recent completion or near completion of various genome projects are enabling biochemists to understand not only about control and regulation of secondary metabolism and how various pathways relate to each other but also about its relation to primary metabolism. A major paradigm shift is occurring in the way researchers need to view secondary metabolism in the future. It is also clear that model systems such as the ones discussed in the symposium are providing new information and insight almost faster than researchers can process it. The volumes in this series contain articles on developing topics of interest to scientists, students and individuals interested in recent developments in the biochemistry, chemistry and molecular biology of plants. An excellent series volume covering the advances in understanding of gene functions, a high profile area of research due to recent genome projects. This book provides essential information on new model systems available to biochemists. The chapters in this volume are based on the papers presented in the symposium entitled *Secondary Metabolism in Model Systems* Integrative Plant Biochemistry John Romeo, 2006-09-26. The publication of this volume marks the 40th anniversary of the Recent Advances in Phytochemistry series which has essentially documented a history of the origins of Phytochemistry. The 45th annual meeting of the Phytochemical Society of North America (PSNA) was held July 13-August 3, 2005 in La Jolla, California, USA. The meeting was hosted by the Salk Institute for Biological Studies. The theme of the meeting was Integrative Plant Biochemistry as we Approach 2010. The focus was to celebrate the past accomplishments of the PSNA and its focus, the growing importance of phytochemistry and plant biochemistry to the public and to set a course for the future by linking the past with the present and attracting a wider breath of scientists and disciplines to the society. Integrative Plant Biochemistry summarizes a number of important methodological approaches and innovative techniques that were discussed at the meeting: Biosynthesis and Regulation of Signaling Molecules, Conservation and Divergence in Enzyme Function, Translational Opportunities in Plant Biochemistry, Temporal and Spatial Regulation of Metabolism, Lipids, Fatty Acids and Related Molecules, Metabolic Networks. Each chapter in this volume concludes with a short summary and addresses the expected future directions of the work. The series marks the transition and progression of the dramatic integration of classical phytochemistry into molecular plant biology. Explores the growing importance of phytochemistry and biochemistry. Discusses important methodological approaches and innovative techniques. Representation from a unique interdisciplinary forum of scientists at the 45th Annual meeting of the Phytochemical Society of North America. *Frontiers in Anti-Cancer Drug Discovery* Atta-ur-Rahman, M.
