Artificial Life Christopher

Langton, 2019-04-02 In September 1987 the first workshop on Artificial Life was held at the Los Alamos National Laboratory Jointly sponsored by the Center for Nonlinear Studies the Santa Fe Institute and Apple Computer Inc the workshop brought together 160 computer scientists biologists physicists anthropologists and other assortedists all of whom shared a common interest in the simulation and synthesis of living systems During five intense days we saw a wide variety of models of living systems including mathematical models for the origin of life self reproducing automata computer programs using the mechanisms of Darwinian evolution to produce co adapted ecosystems simulations of flocking birds and schooling fish the growth and development of artificial plants and much much more The workshop itself grew out of my frustration with the fragmented nature of the literature on biological modeling and simulation For years I had prowled around libraries shifted through computer search results and haunted bookstores trying to get an overview of a field which I sensed existed but which did not seem to have any coherence or unity Instead I literally kept stumbling over interesting work almost by accident often published in obscure journals if published at all

The World Yearbook of Robotics Research and Development
Sbornik Statei,2013-04-17

How quickly the technological flavour of the month changes At the beginning of the 1980 s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession Those working at the time in the field of robotics stressed that robots themselves were only part of the solution Yet in many quarters the hype for the new technology apparently knew few bounds resulting inexorably in many industries painfully discovering for themselves a new realism closely followed by disillusionment In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate
