Relational Database Systems Analysis And Comparison:

Relational Database Systems Joachim W. Schmidt, Michael L. Brodie, 2012-12-06 After a long period of research development test and trial relational database management systems are at last being marketed in force The feedback from early installations of these systems is overwhelmingly positive The most frequent comment by users is that productivity has been increased by a significant factor from 5 to 20 times what it was using previous approaches Another comment is that in many cases end users can now handle their own problems by direct use of the system instead of using application programmers as mediators between them and the system As the reputation of relational systems for ease of use and enhanced productivity has grown there has been a strong temptation for vendors of other approaches to exploit the label relational somewhat indiscriminately In some cases the label is being misapplied to a whole data system in others it is being misapplied to an interface It is therefore worth developing criteria which database management systems DBMSs should have in order to be called relational The Relational Task Group RTG of the American National Standards Institute ANSI undertook such an effort by developing a characterization of RDBMSs and analyzing fourteen DBMSs per this characterization The result of this work is presented in this book The conclusions of the RTG are in agreement with my view that a DBMS should not be called relational unless it satisfies at least the following conditions 1 All information in the database is represented as values in tables *Analysis and Comparison of Relational Database Systems* Patrick Valduriez, Georges Gardarin, 1989

Query Processing in Database Systems W. Kim, D.S. Reiner, Don Batory, 2012-12-06 This book is an anthology of the results of research and development in database query processing during the past decade The relational model of data provided tremendous impetus for research into query processing Since a relational query does not specify access paths to the stored data the database management system DBMS must provide an intelligent query processing subsystem which will evaluate a number of potentially efficient strategies for processing the query and select the one that optimizes a given performance measure The degree of sophistication of this subsystem often called the optimizer critically affects the performance of the DBMS Research into query processing thus started has taken off in several directions during the past decade The emergence of research into distributed databases has enormously complicated the tasks of the optimizer In a distributed environment the database may be partitioned into horizontal or vertical fragments of relations Replicas of the fragments may be stored in different sites of a network and even migrate to other sites The measure of performance of a query in a distributed system must include the communication cost between sites To minimize communication costs for queries involving multiple relations across multiple sites optimizers may also have to consider semi join techniques

Database Machines H.-O. Leilich, M. Missikoff, 2012-12-06 The International Workshop on Database Machines in Munich is the third of its kind preceded by the meetings in Florence Sept 81 and San Diego Sept 82 The workshop is aimed at providing an interchange of ideas and experience on computer systems designed to perform database operations more

efficiently than general purpose computers with a software database management system Many proposals have been published during the past 10 years but now several systems have been built and practically implemented and some are even commercially available so that confrontation with the real world is starting to occur The kinds of question which arise during this phase of coming to maturity are those involved with evaluation and measurement The emphasis of the workshop is therefore on performance evaluation and the respective modelling techniques and methodology Data flow and other new topics including algorithms are also treated with respect to performance and efficiency We are glad to be able to include some papers on existing commercial products from both the designer and the user viewpoints We hope to encourage critical comments in this field and have arranged a session with the title Where Database Machines Are Going to be followed by a panel discussion

Readings in Artificial Intelligence and Databases John Mylopoulos, Michael L. Brodie, 2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI

Concurrency Control in Distributed Database Systems W. Cellary, T. Morzy, E. Gelenbe, 2014-06-28 Distributed Database Systems DDBS may be defined as integrated database systems composed of autonomous local databases geographically distributed and interconnected by a computer network The purpose of this monograph is to present DDBS concurrency control algorithms and their related performance issues The most recent results have been taken into consideration A detailed analysis and selection of these results has been made so as to include those which will promote applications and progress in the field The application of the methods and algorithms presented is not limited to DDBSs but also relates to centralized database systems and to database machines which can often be considered as particular examples of DDBSs The first part of the book is devoted to basic definitions and models the distributed database model the transaction model and the syntactic and semantic concurrency control models The second discusses concurrency control methods in monoversion DDBSs the locking method the timestamp ordering method the validation method and hybrid methods For each method the

concept the basic algorithms a hierarchical version of the basic algorithms and methods for avoiding performance failures are given The third section covers concurrency control methods in multiversion DDBSs and the fourth methods for the semantic concurrency model The last part concerns performance issues of DDBSs The book is intended primarily for DDBMS designers but is also of use to those who are engaged in the design and management of databases in general as well as in problems of distributed system management such as distributed operating systems and computer networks SOFSEM '98: Theory and Practice of Informatics Branislav Rován, 2003-06-29 This book constitutes the proceedings of the 25th Seminar on Current Trends in Theory and Practice of Informatics SOFSEM 98 held in Jasna Slovakia in November 1998 The volume presents 19 invited survey articles by internationally well known authorities together with 18 revised full research papers carefully reviewed and selected for inclusion in the book The areas covered include history of models of computation algorithms formal methods practical aspects of software engineering database systems parallel and distributed systems electronic commerce and electronic documents and digital libraries **Systems Analysis and Design** Alan Dennis, Barbara Wixom, David Tegarden, 2015-03-02 Systems Analysis and Design An Object Oriented Approach with UML 5th Edition by Dennis Wixom and Tegarden captures the dynamic aspects of the field by keeping students focused on doing SAD while presenting the core set of skills that every systems analyst needs to know today and in the future The text enables students to do SAD not just read about it but understand the issues so they can actually analyze and design systems The text introduces each major technique explains what it is explains how to do it presents an example and provides opportunities for students to practice before they do it for real in a project After reading each chapter the student will be able to perform that step in the system development process *Foundations of Knowledge Base Management* Joachim W. Schmidt, Costantino Thanos, 2012-12-06 In the past applied artificial intelligence systems were built with particular emphasis on general reasoning methods intended to function efficiently even when only relatively little domain specific knowledge was available In other words AI technology aimed at the processing of knowledge stored under comparatively general representation schemes Nowadays the focus has been redirected to the role played by specific and detailed knowledge rather than to the reasoning methods themselves Many new application systems are centered around knowledge bases i e they are based on large collections of facts rules and heuristics that capture knowledge about a specific domain of applications Experience has shown that when used in combination with rich knowledge bases even simple reasoning methods can be extremely effective in a wide variety of problem domains Knowledge base construction and management will thus become the key factor in the development of viable knowledge based applications Knowledge Base Management Systems KBMSs are being proposed that provide user friendly environments for the construction retrieval and manipulation of large shared knowledge bases In addition to deductive reasoning KBMSs require operational characteristics such as concurrent access integrity maintenance error recovery security and perhaps distribution For the development of KBMSs the need to integrate concepts and

technologies from different areas such as Artificial Intelligence Databases and Logic has been widely recognized One of the central issues for KBMSs is the framework used for knowledge representation semantic networks frames rules and logics are proposed by the AI and logic communities

Knowledge Engineering John Debenham, 2012-12-06 This monograph describes a methodology for the design of knowledge based systems A knowledge based system contains knowledge as well as information and data The information and data in such a system can be modelled and implemented as a database The knowledge in such a system can be implemented either in a programming language or in an expert systems shell This methodology has two distinguishing features First it is unified A unified methodology represents the data information and knowledge in a homogeneous manner as well as the relationships between them Second the methodology builds a maintenance mechanism into the design In knowledge engineering terms the representation used by this methodology to model knowledge bases applies equally to databases In database terms the representation used by this methodology to model databases applies equally to the database rules The unified methodology unifies the design of the knowledge base component and the database component Unification is achieved in five senses

Willems,R. O'Moore,B. Barber,2012-12-06 *On Knowledge Base Management Systems* Michael L. Brodie,John Mylopoulos,2012-12-06 Current experimental systems in industry government and the military take advantage of knowledge based processing For example the Defense Advanced Research Projects Agency DARPA and the United States Geological Survey USGS are supporting the develop ment of information systems that contain diverse vast and growing repositories of data e g vast databases storing geographic informa tion These systems require powerful reasoning capabilities and processing such as data processing communications and multidisciplinary of such systems will scientific analysis The number and importance grow significantly in the near future Many of these systems are severely limited by current knowledge base and database systems technology Currently knowledge based system technology lacks the means to provide efficient and robust knowledge bases while database system technology lacks knowledge representation and reasoning capabilities The time has come to face the complex research problems that must be solved before we can design and implement real large scale software systems that depend on knowledge based processing To date there has been little research directed at integrating knowledge base and database technologies It is now imperative that such coordinated research be initiated and that it respond to the urgent need for a tech nology that will enable operational large scale knowledge based system applications
