Short-Term Decisions Equal Long-Term Disasters Craig Allen, 2003-08 SHORT TERM DECISIONS equal LONG TERM DISASTERS by Craig D Allen CFA CFP CIMA is an instruction manual for dealing with day to day decisions in a structured and constructive manner This book does not espouse one specific solution to any problem Rather it proposes a systematic framework of decision making intended as a guide to help you solve your own problems through deliberate analysis and positive change As the author states I see this book as a life manual intended to guide you in your quest to get what you want out of life and to feel good about yourself in the process Too often our natural tendencies drive us to look for a quick fix solution to a given problem that provides us with the most attractive short term benefit As the author states What I will propose in this book is that human behavior tends to favor making decisions based on obtaining short term benefits which rarely result in the person attaining their true goals This book explores the motivating factors that push us towards these short term decisions and the methods we can use to short circuit this behavior to improve our decision making process and thus the quality of our lives

Decision Aid Models for Disaster Management and

Emergencies Begoña Vitoriano, Javier Montero, Da Ruan, 2013-01-26 Disaster management is a process or strategy that is implemented when any type of catastrophic event takes place. The process may be initiated when anything threatens to disrupt normal operations or puts the lives of human beings at risk. Governments on all levels as well as many businesses create some sort of disaster plan that make it possible to overcome the catastrophe and return to normal function as quickly as possible. Response to natural disasters e.g. floods, earthquakes or technological disaster e.g. nuclear chemical is an extreme complex process that involves severe time pressure, various uncertainties, high non-linearity and many stakeholders. Disaster management often requires several autonomous agencies to collaboratively mitigate, prepare, respond and recover from heterogeneous and dynamic sets of hazards to society. Almost all disasters involve high degrees of novelty to deal with most unexpected various uncertainties and dynamic time pressures. Existing studies and approaches within disaster management have mainly been focused on some specific type of disasters with certain agency oriented. There is a lack of a general framework to deal with similarities and synergies among different disasters by taking their specific features into account. This book provides with various decisions analysis theories and support tools in complex systems in general and in disaster management in particular. The book is also generated during a long term preparation of a European project proposal among most leading experts in the areas related to the book title. Chapters are evaluated based on quality and originality in theory and methodology, application oriented relevance to the title of the book.
