The Class Action in Common Law Legal Systems Rachael Mulheron, 2004-11-15 Multi party litigation is a world wide legal process and the class action device is one of its best known manifestations As a means of providing access to justice and achieving judicial economies the class action is gaining increasing endorsement particularly given the prevalence of mass consumerism of goods and services and the extent to which the activities and decisions of corporations and government bodies can affect large numbers of people The primary purpose of this book is to compare and contrast the class action models that apply under the federal regimes of Australia and the United States and the provincial regimes of Ontario and British Columbia in Canada While the United States model is the most longstanding there have now been sufficient judicial determinations under each of the studied jurisdictions to provide a constructive basis for comparison In the context of the drafting and application of a workable class action framework it is apparent that similar problems have been confronted across these jurisdictions which in turn promotes a search for assistance in the experience and legal analysis of others The book is presented in three Parts The first Part deals with the class action concept and its alternatives and also discusses and critiques the stance of England where the introduction of the opt out class action model has been opposed The second Part focuses upon the various criteria and factors governing commencement of a class action encompassing matters such as commonality superiority suitability and the class representative Part 3 examines matters pertaining to conduct of the action itself such as becoming a class member notice requirements settlement judgments and costs and fees The book is written to have practical utility for a wide range of legal practitioners and professionals such as academics and students of comparative civil procedure and multi party litigation litigation lawyers who may use the reference materials cited to the benefit of their

Health Law and the European Union Tamara K. Hervey, Jean V. McHale, 2004-11-04 How does the law of the European Union affect health law and policy At first sight it seems limited However despite its restricted formal competence the EU has recently become increasingly involved in the health field Litigation based on EU law has resulted in a right to receive health care services across national boundaries which may have huge practical implications for national health systems The EU has promulgated legislation regulating clinical research and the marketing of pharmaceuticals patients rights are affected by EU legislation on data protection and product liability the qualifications of health care professionals are legally recognised across the EU and the EU has acted to promote public health This book explores the various impacts of measures of EU law on national health law and policy Through elaboration of selected examples the authors show that within the EU health law cannot be regarded as a purely national affair

Medicinal Product Liability and Regulation Richard Goldberg, 2013-10-10 The piecemeal developments in product liability reform in Europe have their origins in the tragic association of phocomelia in children with thalidomide in 1962 In many ways these events have continued to generate pressure for reform of product liability especially for the victims of drug induced injury This monograph attempts to address the major problems that typify claims for drug induced injury as well as highlighting the complex interrelationship between liability exposure and drug regulation While medicinal products are subject to strict liability under the product liability directive the claimant may have considerable difficulty in establishing that the relevant product is defective and that it caused the damage It may also be necessary to overcome the development risk defence where

this is pleaded The monograph addresses these problems on a comparative jurisprudential basis and seeks to determine whether medicinal products should be treated as a special case in the field of product liability It examines the role of epidemiological evidence in assessing causation in product liability cases concerning medicinal products in the light of recent developments in the UK Supreme Court the United States Canada and France In particular it addresses the difficulties in reconciling the standards of proof in law and science including the theory that causation can be proved on the balance of probabilities by reference to the doubling of risk of injury An important case study compares and contrasts the approaches of the UK and the US to the measles mumps rubella Litigation The book also examines the question as to whether compliance with regulatory standards should protect pharmaceutical manufacturers from product liability suits It seeks to support a via media whereby the victims of drug induced injury can receive justice while at the same time encouraging drug safety and innovation in drug development
