

SIX SIGMA CURVE

Six Sigma curve is a quality control methodology. This method was introduced in 1986. It seems to reduce product defects to within 3.4 defects for every million units produced

Six Sigma also provides an array of tools and management philosophies for driving out process variation and producing value for the customer

Important facts:

- * It is a fundamental belief of product quality or consistency
- * Six Sigma activities are usually organized into projects that often result in mechanical changes to the process that lead to reduce variation and greater control of outcomes

Now, Six Sigma project follows an structure what is called the DMAIC method, which means:
