Finite Volumes for Complex Applications X—Volume 1, Elliptic and Parabolic Problems Emmanuel Franck, Jürgen Fuhrmann, Victor Michel-Dansac, Laurent Navoret, 2023-09-30 This volume comprises the first part of the proceedings of the 10th International Conference on Finite Volumes for Complex Applications FVCA held in Strasbourg France during October 30 to November 3 2023 The Finite Volume method and several of its variants is a spatial discretization technique for partial differential equations based on the fundamental physical principle of conservation Recent decades have brought significant success in the theoretical understanding of the method Many finite volume methods are also built to preserve some properties of the continuous equations including maximum principles dissipativity monotone decay of the free energy asymptotic stability or stationary solutions Due to these properties finite volume methods belong to the wider class of compatible discretization methods which preserve qualitative properties of continuous problems at the discrete level This structural approach to the discretization of partial differential equations becomes particularly important for multiphysics and multiscale applications In recent years the efficient implementation of these methods in numerical software packages more specifically to be used in supercomputers has drawn some attention This volume contains all invited papers as well as the contributed papers focusing on finite volume schemes for elliptic and parabolic problems They include structure preserving schemes convergence proofs and error estimates for problems governed by elliptic and parabolic partial differential equations The second volume is focused on finite volume methods for hyperbolic and related problems such as methods compatible with the low Mach number limit or able to exactly preserve steady solutions the development and analysis of high order methods or the discretization of kinetic equations

[Chess for Schools](#) Richard James, 2022-08-26 Written by Richard James Chess for Schools From simple strategy games to clubs and competitions is a great resource to help teachers encourage children to enjoy the benefits and challenges of the chess game Chess is a game of extraordinary excitement and beauty and all children should have the opportunity to experience it Indeed

many claim that playing abstract strategy games such as chess provides a wide range of cognitive and social benefits such as improvements in problem solving ability and communication skills However Richard James argues that because of the complexity of chess most younger children would gain more benefit from simpler chess based strategy games and incremental learning In this practical handbook Richard provides a wide range of games and puzzles based on these principles which are appropriate for primary schools and explains how teachers can identify children who would benefit from starting young Richard also sets out how this approach can engage the whole community including working with children with special needs getting parents involved in learning and playing and developing partnerships between primary and secondary schools Chess for Schools shares the latest research into how children process information combined with insights into international best practice in teaching chess to young children The book demonstrates the transformative effect chess can have on older children and how this can be promoted in secondary schools Richard James offers valuable insights into the greater context of chess playing expressing how and why chess is a joy to so many worldwide and shares a series of resources and minigames for teachers to use with their learners An ideal resource for primary and secondary school teachers wanting to introduce their pupils to chess
