*The Anthropology of Magic* Susan Greenwood,2020-05-28 Magic is arguably the least understood subject in anthropology today Exotic and fascinating it offers us a glimpse into another world but it also threatens to undermine the foundations of anthropology due to its supposed irrational and non scientific nature Magic has thus often been explained away by social or psychological reduction The Anthropology of Magic redresses the balance and brings magic as an aspect of consciousness into focus through the use of classic texts and cutting edge research Suitable for student and scholar alike The Anthropology of Magic updates a classical anthropological debate concerning the nature of human experience A key theme is that human beings everywhere have the potential for magical consciousness Taking a new approach to some perennial topics in anthropology such as shamanism mythology witchcraft and healing the book raises crucial theoretical and methodological issues to provide the reader with an engaging and critical understanding of the dynamics of magic Join the live discussion on Facebook

**Knowing the Unknown: Through Science and Sufism** Dr. Ghayur Ayub,2016-06-09 Knowing the Unknown Through Science and Sufism touches on the creation of the universe starting from the Big Bang and following through the phases of evolution until the present day discussing the appearance of life on earth after billions of years of turmoil It looks at the early beginnings of religion in prehistoric societies and how this progressed into organized religion as we know it today This book explores the similarities between the scientific concepts related to evolutionary change and the concepts that Sufis have highlighted with reference to verses of the Quran It discusses the history of mankind and the journey through theological philosophical and spiritual phases The book attempts to expand on the concept of time in relation to evolution and the difficulty in defining time and why the Quran mentions different times in different verses and also on an understanding of time in the present day The subject matter is vast but this book has attempted to address it in a more easily accessible way

*Science and Religion United* Ulrich A. K. Betz,2024-05-30 This book offers a fresh perspective on how science and religion are connected and how prayer aligns with the laws of nature It explores a holistic worldview where science and religion complement each other shedding light on life society and philosophical and societal concerns We are born into a world full of mysteries that we only partially understand We don't know where we are coming from we don't know why we live and we don't know where we will go We

don't know how everything started we even don't know what everything really is We are living in an era of rapid change marked by disruptive technologies like artificial intelligence and computers Combined with a perception that the old wisdom transferred to us by religion is outdated traditional values and institutions that had worth and power over many centuries are now losing their appeal Science has made remarkable progress but can't answer life's most profound questions about our origins purpose and destination why do we live and what should we do In this book the author begins with an overview of science our understanding of the universe highlighting gaps in our knowledge like what started the Big Bang followed by examples of successful scientific achievements and insights into the limits of science In the subsequent chapters the author examines topics such as mind over matter and the coexistence of evolution creation natural laws and miracles An attempt to answer the theodicy question is also provided in this book where the author connects new scientific discoveries with ancient religious wisdom The book concludes with a chapter devoted to innovation and a call for building a better world This book is a compelling read for scholars professionals and curious laymen alike ready to expand their horizons Cultures of Energy

Sarah Strauss, Stephanie Rupp, Thomas Love, 2016-06-16 This path breaking volume explores cultures of energy the underlying but under appreciated dimensions of both crisis and innovation in resource use around the globe Theoretical chapters situate pressing energy issues in larger conceptual frames and ethnographic case studies reveal energy as it is imagined used and contested in a variety of cultural contexts Contributors address issues including the connection between resource flows and social relationships in energy systems cultural transformation and notions of progress and collapse the blurring of technology and magic social tensions that accompany energy contraction and sociocultural changes required in affluent societies to reduce dependence on fossil fuels Each of five thematic sections concludes with an integrative and provocative conversation among the authors The volume is an ideal tool for teaching unique contemporary and comparative perspectives on social theories of science and technology in undergraduate and graduate courses **Magic's Translations**

Margaret J. Wiener, 2025-04-04 Do you believe in magic This familiar question suggests magic is easily recognized but unreal In *Magic's Translations* Margaret J Wiener argues that such views are shaped by historical power struggles especially in Europe's relations with the wider world Focusing on nineteenth and twentieth century Dutch interactions with Indonesians Wiener reveals how colonial agents framed unfamiliar practices practitioners and objects as magic rendering distinct phenomena fundamentally alike and advancing colonizing projects that deemed magic antithetical to reason and reality While colonial authorities including ethnologists mobilized the concept of magic to differentiate Europeans from Indonesians nature from culture reason from superstition and fact from fetish their efforts produced unexpected outcomes Some Indonesian artifacts and acts not only retained their power but invaded European experiences As anthropologists were among the key translators of magic throughout the world Wiener intersperses accounts of magic's translations in the Indies with reflections on anthropology's ongoing engagement with the concept She demonstrates that magic became an object of expert knowledge

*Magic in Early Modern England* Andrew Moore,2023-05-15 This book reconsiders the place of magic at the foundations of modernity Through careful close reading of plays spell books philosophical treatises and witch trial narratives Andrew Moore shows us that magic was ubiquitous in early modern England Rather than a decline of magic this study traces a broad cultural fascination with supernatural power In the sixteenth and seventeenth centuries poets philosophers jurists and monarchs debated the reality and the morality of magic and by extension the limits of human power In this way early modern English writing about magic was closely related to the scientific and political philosophical writing from the period which was likewise reimagining humanity s relationship to nature Moore reads Thomas Hobbes s Leviathan alongside contemporary writing by the notorious witch hunters Matthew Hopkins and John Stearne He reminds us that Francis Bacon s scientific works were addressed to King James I whose own D monologie insists on the reality of witchcraft The fantastical science fiction of Margaret Cavendish he argues must be understood within a tradition that includes works like Christopher Marlowe s Doctor Faustus and the peculiar autobiography of criminal astrologer Simon Forman By considering these disparate works together Moore reveals the centrality of magic to the early modern project     Magic: A History Chris Gosden,2020-11-10 An Oxford professor of archaeology explores the unique history of magic the oldest and most neglected strand of human behavior and its resurgence today Three great strands of belief run through human history Religion is the relationship with one god or many gods masters of our lives and destinies Science distances us from the world turning us into observers and collectors of knowledge And magic is direct human participation in the universe we have influence on the world around us and the world has influence on us Over the last few centuries magic has developed a bad reputation thanks to the unsavory tactics of shady practitioners and to a successful propaganda campaign on the part of religion and science which denigrated magic as backward irrational and primitive In *Magic* however the Oxford professor of archaeology Chris Gosden restores magic to its essential place in the history of the world revealing it to be an enduring element of human behavior that plays an important role for individuals and cultures From the curses and charms of ancient Greek Roman and Jewish magic to the shamanistic traditions of Eurasia indigenous America and Africa from the alchemy of the Renaissance to the condemnation of magic in the colonial period and the mysteries of modern quantum physics Gosden s startling fun and colorful history supplies a missing chapter of the story of our civilization Drawing on decades of research around the world touching on the first known horoscope a statue ordered into exile and the mystical power of tattoos Gosden shows what magic can offer us today and how we might use it to rethink our relationship with the world *Magic* is an original singular and sweeping work of scholarship and its revelations will leave a spell on the reader     **Magical Consciousness** Susan Greenwood,Erik D. Goodwyn,2015-08-20 How does a mind think magically The research documented in this book is one answer that allows the

disciplines of anthropology and neurobiology to come together to reveal a largely hidden dynamic of magic Magic gets to the very heart of some theoretical and methodological difficulties encountered in the social and natural sciences especially to do with issues of rationality This book examines magic head on not through its instrumental aspects but as an orientation of consciousness Magical consciousness is affective associative and synchronistic shaped through individual experience within a particular environment This work focuses on an in depth case study using the anthropologist s own experience gained through years of anthropological fieldwork with British practitioners of magic As an ethnographic view it is an intimate study of the way in which the cognitive architecture of a mind engages the emotions and imagination in a pattern of meanings related to childhood experiences spiritual communications and the environment Although the detail of the involvement in magical consciousness presented here is necessarily specific the central tenets of *modus operandi* is common to magical thought in general and can be applied to cross cultural analyses to increase understanding of this ubiquitous human phenomenon

*Symbolic Forms as the Metaphysical Groundwork of the Organon of the Cultural Sciences* Israel Bar-Yehuda Idalovich, 2014-10-16 This ambitious work reclassifies and restructures the history of ideas and the philosophy of culture through a wide ranging and novel use of the idea of the organon It does so by radically revising standard interpretations and theories of all branches of philosophy and by providing an intellectual and philosophical foundation for the new organon of the cultural sciences Furthermore the seeded idea that saw its growth in the form of this book is the unshakable conviction that the only way by which a new apparatus of philosophy an organon could be created is by harking back to the vast sources of imagination inspiration and *mim sis* This entire study is based on the notion that metaphysics insofar as it is concerned with the world in its entirety and with human being s existence and thought should provide the foundation for the organon of cultural sciences based on symbolic forms Given that the colossal amount of information and knowledge of philosophy arts humanities logic mathematics social sciences and natural sciences cannot be comprised analyzed and comprehended *per se* it is the organon s objective to extract the main principles ideas postulates theorems and theories of the cultural sciences and subsequently to shape and restructure them as symbolic forms Since all these principles are grounded on Becoming which is not a stable or fixed entity such as Being substance or thing the symbolic forms preserve and change elevate and further the organon of the cultural sciences via a critical dialectical process
