Human Rights and Statistics Thomas B. Jabine, Richard Pierre

Claude, 2016-11-11 Effective human rights advocacy and research require the use of statistics carefully collected and objectively analyzed and presented using the best techniques available Statistics that lack credibility are of little value Those that can be defended against critics can be effective in throwing the light on violations and promoting the observance of human rights for all The contributors to this book including experts in political science public health law forensic pathology and statistics illustrate good statistical practice in the field of human rights and show the importance of collaboration between statisticians and other professionals The treatment is largely nonmathematical and the examples provide broad coverage of all features of the collection and use of statistical data on human rights violations For readers who would like to do their own analyses an extensive guide to human rights data sources is included This book is the first to describe and summarize important issues associated with the collection and uses of human rights statistics **Recent Progress in**

Brain and Cognitive Engineering

Seong-Whan Lee, Heinrich H. Bülthoff, Klaus-Robert Müller, 2015-10-27

For Recent Progress in Brain and Cognitive Engineering Brain and Cognitive Engineering is a converging study field to derive a better understanding of cognitive information processing in the human brain to develop human like and neuromorphic artificial intelligent systems and to help predict and analyze brain related diseases The key concept of Brain and Cognitive Engineering is to understand the Brain to interface the Brain and to engineer the Brain It could help us to understand the structure and the key principles of high order information processing on how the brain works to develop interface technologies between a brain and external devices and to develop artificial systems that can ultimately mimic human brain

functions The convergence of behavioral neuroscience and engineering research could lead us to advance health informatics and personal learning to enhance virtual reality and healthcare systems and to reverse engineer some brain functions and build cognitive robots In this book four different recent research directions are presented Non invasive Brain Computer Interfaces Cognitive and Neural rehabilitation Engineering Big Data Neurocomputing Early Diagnosis and Prediction of Neural Diseases We cover numerous topics ranging from smart vehicles and online EEG analysis neuroimaging for Brain Computer Interfaces memory implantation and rehabilitation big data computing in cultural aspects and cybernetics to brain disorder detection Hopefully this will provide a valuable reference for researchers in medicine biomedical engineering in industry and academia for their further investigations and be inspiring to those who seek the foundations to improve techniques and understanding of the Brain and Cognitive Engineering research field

Encyclopedia of Measurement and Statistics Neil J. Salkind, 2007 Publisher Description [Design, Evaluation, and Analysis of Questionnaires for Survey Research](#) Willem E. Saris, Irmtraud N. Gallhofer, 2007-07-20 Features the essential methodologies and statistical tools for developing reliable and valid survey questionnaires Modern survey design requires the consideration of many variables that will ultimately impact the quality of the collected data Design Evaluation and Analysis of Questionnaires for Survey Research outlines the important decisions that researchers need to make throughout the survey design process and provides the statistical knowledge and innovative tools that are essential when approaching these choices Over fifteen years of survey design research has been referenced in order to conduct a meta analysis that not only unveils the relationship between individual question characteristics and overall questionnaire quality but also assists the reader in constructing a questionnaire of the highest relevance and accuracy Among the book s most outstanding features is its introduction of Survey Quality Prediction SQP a computer program that predicts the validity and accuracy of questionnaires based on findings from the meta analysis Co developed by the authors this one of a kind software is available via the book s related Web site and provides a valuable resource that allows researchers to estimate a questionnaire s level of quality before its distribution In addition to carefully outlining the criteria for high quality survey questions this book also Defines a three step procedure for generating questions that measure with high certainty the concept defined by the researcher Analyzes and details the results of studies that used Multitrait Multimethod MTMM experiments to estimate the reliability and validity of questions Provides information to correct measurement error in survey results with a chapter focusing specifically on cross cultural research Features practical examples that illustrate the pitfalls of traditional questionnaire design Includes exercises that both demonstrate the methodology and help readers master the presented techniques Design Evaluation and Analysis of Questionnaires for Survey Research succeeds in illustrating how questionnaire design influences the overall quality of empirical research With an emphasis on a deliberate and scientific approach to developing questionnaires this book is an excellent text for upper level undergraduate or beginning graduate level survey research courses in business and the social

sciences and it also serves as a self contained reference for survey researchers in any field **Notes on Social**

individuals have preferences regarding the various goods and services they purchase every day so they also hold preferences regarding public goods such as those provided by the natural environment However unlike private goods environmental goods often cannot be valued by direct reference to any market price This makes economic analysis of the costs and benefits of environmental change problematic Over the past few decades a number of methods have developed to address this problem

by attempting to value environmental preferences. Principal among these has been the contingent valuation CV method which uses surveys to ask individuals how much they would be willing to pay or willing to accept in compensation for gains and losses of environmental goods. The period from the mid 1980s to the present day has seen a massive expansion in use of the CV method. From its original roots in the USA through Europe and the developed world the method has now reached worldwide application with a substantial proportion of current studies being undertaken in developing countries where environmental services are often the dominating determinant of everyday living standards. The method has simultaneously moved from the realm of pure academic speculation into the sphere of institutional decision analysis. However the past decade also witnesses a developing critique of the CV method with a number of commentators questioning the underlying validity of its derived valuations. This volume therefore reflects a time of heated debate as well as from commentators who see it as an interesting experimental tool regardless of the question of absolute validity of estimates. The book embraces the theoretical methodological empirical and institutional aspects of the current debate. It covers US European and developing country applications and the institutional frameworks within which CV studies are applied.

New Frontiers in Comparative Sociology Masamichi S. Sasaki, 2009. This book is a collection of notable papers from the first six volumes of the journal *Comparative Sociology*. Its content represents leading edge and contemporarily astute analyses in the burgeoning science of comparative sociology especially relevant to a globalizing world in transition. Given that not everyone is acquainted with comparative sociology this book offers an opportunity to enlighten readers unfamiliar with the discipline about the importance of comparative sociology to the new world order. Taken together the articles illuminate various aspects of comparative sociology: a theoretical methodological substantive. Some compare social entities in subjective case study fashion while others report on rigorous social research. All contribute in one form or another to describing the many and varied facets of the exciting and new science of comparative sociology. The content of this volume has previously been published in *Comparative Sociology* volumes 1 to 6.

Experimental Syntax Wayne Cowart, 1997-01-23. This original work provides a concise introduction to methods that linguists may use to describe patterns of sentence acceptability in speech communities. *Experimental Syntax* will enable an investigator with a well formed question about a matter of fact relative to sentence acceptability to design execute and analyze an appropriate survey experiment. The book examines variability and demonstrates a method by which an investigator can make principled decisions as to whether individual informants do or do not use a particular dialect. Furthermore this well formulated book shows how to determine whether two or more informants who use atypical dialects are using the same atypical dialect. *Experimental Syntax* is recommended to researchers and professionals in linguistics who are interested in learning more about the methods available for dialect and sentence structure studies.

Competing Structures in the Bilingual Mind Elif Bamyacı, 2015-12-28. This volume combines psycholinguistic experiments with typological investigations in order to provide a comprehensive exploration of the linguistic

structure of verb number agreement in bilingual speakers with a particular focus on the Turkish language. It takes as its starting point the question of which linguistic structures pose difficulties for bilingual speakers and then proceeds to evaluate the question by using the interface phenomenon of optional verb number agreement. In doing so, this volume investigates how the bilingual mind handles grammatical structures that demand high processing resources working towards a processing based linguistic framework for the bilingual mind. Beginning with a thorough survey of the current research of the interface phenomenon in the bilingual mind, the volume then proceeds to present two separate studies on each linguistic interface type, namely semantics/syntax interface and syntax/pragmatics interface, thus filling a number of gaps in the bilingualism research with regards to the interface phenomenon. The results and conclusions of these studies are then integrated with current knowledge and research from the field within a theoretical and processing based framework in order to explore new psycholinguistic insights for the bilingual mind, specifically the conclusion that the grammar of bilingual speakers is shaped according to cross linguistic tendencies. Ultimately, it provides a unified account and a comprehensive conclusion regarding the non-native like patterns in the grammar of bilingual speakers. Serving as a fascinating and timely resource, *Competing Structures in the Bilingual Mind: An Investigation of Optional Verb Number Agreement* will appeal to bilingualism researchers, clinical linguists, cognitive scientists, experimental linguists, and any linguist specializing in Turkic or Altaic languages.

Elicitation of Preferences Baruch Fischhoff, Charles F. Manski, 2013-03-14. Economists and psychologists have on the whole exhibited sharply different perspectives on the elicitation of preferences. Economists, who have made preference the central primitive in their thinking about human behavior, have for the most part rejected elicitation and have instead sought to infer preferences from observations of choice behavior. Psychologists, who have tended to think of preference as a context determined subjective construct, have embraced elicitation as their dominant approach to measurement. This volume, based on a symposium organized by Daniel McFadden at the University of California at Berkeley, provides a provocative and constructive engagement between economists and psychologists on the elicitation of preferences.
