Reports of General

MacArthur: Japanese operation in the southwest Pacific area, compiled from Japanese Demobilization Bureaux records  
 Supreme Commander for the Allied Powers, 1966      **Operational Warfare at Sea** Milan Vego, 2017-07-06 This work explains and critically examines the main theoretical aspects of operational warfare at sea. It utilizes diverse examples from naval history ranging from the ancient era to the present day to offer a comprehensive description and analysis of the key components of operational warfare at sea today. Specifically, it explains the military naval objectives, levels of war, types of major naval joint operations and maritime campaigns and their main elements. In contrast to many works, this book focuses on the role of the naval operational commanders in command and control and decision making. It also describes in great detail the main elements of naval operational leadership and operational thinking which are illustrated by examples of successful warfighting admirals. This new edition has been completely revised and updated with three new chapters and analyses in even more detail the planning and execution of major naval joint operations and maritime campaigns. This book is intended to serve as a primer of how to plan, prepare and execute major naval joint operations and maritime campaigns for naval operational commanders and their staffs but will also be of great interest to students of naval power, strategic studies and military history in general.

**Naval Power and Expeditionary Wars** Bruce A. Elleman, S.C.M. Paine, 2010-12-09 This book examines the nature and character of naval expeditionary warfare in particular in peripheral campaigns and the contribution of such campaigns to the achievement of strategic victory. Naval powers which can lack the massive ground forces to win in the main theatre often choose a secondary theatre accessible to them by sea and difficult for their enemies to reach by land, giving the sea power and its expeditionary forces the advantage. The technical term for these theatres is peripheral operations. The subject of peripheral campaigns in naval expeditionary warfare is central to the British, the US and the Australian way of war in the past and in the future. All three are reluctant to engage large land forces because of the high human and economic costs. Instead, they rely as much as possible on sea and air power and the latter is most often in the form of carrier-based aviation. In order to exert pressure on their enemies, they have often opened additional theaters in on-going regional and civil wars. This book contains thirteen case studies by some of the foremost naval historians from the United States, Great Britain and Australia whose collected case studies examine the most important peripheral operations of the last two centuries. This book will be of much interest to students of naval warfare, military history, strategic studies and security studies.
