Neuropathy is damage or dysfunction of one or more nerves that typically results in numbness tingling muscle weakness and pain in the affected area Neuropathies frequently start in your hands and feet but other parts of your body can be affected too Neuropathy often called peripheral neuropathy indicates a problem within the peripheral nervous system Your peripheral nervous system is the network of nerves outside your brain and spinal cord Your brain and spinal cord make up your central nervous system Think of the two systems working together this way Your central nervous system is the central station It is the control center the hub from which all trains come and go Your peripheral nervous system are the tracks that connect to the central station The tracks the network of nerves allow the trains information signals to travel to and from the central station your brain and spinal cord Neuropathy results when nerve cells called neurons are damaged or destroyed This disrupts the way the neurons communicate with each other and with the brain Neuropathy can affect one nerve mononeuropathy or nerve type a combination of nerves in a limited area multifocal neuropathy or many peripheral nerves throughout the body polyneuropathy *The Strange Symptoms and Challenges of Peripheral Neuropathy* James M. Lowrance, 2013-04-09 Over 100 types of PN have been identified according to medical research organizations This demonstrates the fact that each person will experience the physical results of damaged or diseased nerves differently than do their fellow patients Some people feel more of the burning sensation while others may feel very strong tingling that literally feels as if a colony of ants are stinging them simultaneously on their feet and or legs Some PN patients are affected exclusively within their feet and they may experience not only tingling and burning sensations within them but they may also feel stabbing pains as well Others may feel pressure type sensations within their feet and or their hands as if they are swollen when they are actually normal size and no fluid retention edema is present in them Yet other PN sufferers may feel a tightening sensation within their extremities as if they are wrapped tightly with spandex bandages or they are wearing tight

fitting socks or gloves While PN can affect the upper and or lower extremities these are certainly not exclusive to the disease The trunk of the body can also be involved and all organs inside the body can potentially be involved as well This is usually the case with nerve damage or neurological diseases that are severe and widespread within the body systemic or that involve conditions such as fibromyalgia This means that physical sensations may not be the only manifestation of PN but other signs of the disease can include hypo functioning of bodily organs the inadequate operation of them and even a complete failure of them in extreme cases This would include effects that can occur within the kidneys the heart and the lungs Within the the chapters I discuss some of the challenges presented to PN patients resulting from mild moderate and severe PN symptom manifestations I will also relate some of my personal experiences with the disease as I continue through each chapter I will not be discussing causes for the disease specifically in this particular written work but readers can find more about causes and treatments in my companion book titled Peripheral Neuropathy Causes and Treatments To my surprise of my approximate 75 published written works my original peripheral neuropathy book has been my largest seller since it was published in late 2010 This revealed to me that it addresses a very common and rapidly growing health problem My purpose for this new book eBook is to help patients with PN conditions know that they are not alone with the sometimes strange and unusual symptoms of their disease and to help those with friends or loved ones who are sufferers understand how diverse and sometimes severe symptoms of nerve related diseases can actually be
