Nvien, 2003-01 *Irrational Numbers* Ivan Niven, 1985-12-31 In this monograph Ivan Niven provides a masterful exposition of some central results on irrational transcendental and normal numbers He gives a complete treatment by elementary methods of the irrationality of the exponential logarithmic and trigonometric functions with rational arguments The approximation of irrational numbers by rationals up to such results as the best possible approximation of Hurwitz is also given with elementary techniques The last third of the monograph treats normal and transcendental numbers including the transcendence of p and its generalization in the Lindemann theorem and the Gelfond Schneider theorem Most of the material in the first two thirds of the book presupposes only calculus and beginning number theory The book is almost wholly self contained The results needed from analysis and algebra are central and well known theorems and complete references to standard works are given to help the beginner The chapters are for the most part independent There is a set of notes at the end of each chapter citing the main sources used by the author and suggesting further reading **The Number System of**

something of a mathematical tribute to Schall's basic idea and is aptly titled *Another Sort of Mathematics*. Like Schall's book it is not a curriculum. It is however a list of some things from mathematics you should experience but probably were never required to experience. The theorems and proofs in this book represent in a small way some of the best that has been said within the discipline of mathematics. There is something unique in the human soul that can only be satisfied by wondering about mathematics. And that means regardless of your background this book is for you. Reclaim your mathematical inheritance. Embrace the mathematician within you. Choose to wonder. *Princeton Review ACT Prep, 2024*. The Princeton Review, 2024-01-23.
