Physical Play and Children's Digital Games Krystina Madej,2016-11-25 Play engages humans cognitively emotionally and physically at all ages Using a historical framework and focusing on play as represented by material artifacts such as toys and games this book explores play as a form of somatic engagement that reflects cultural attitudes about development and learning as these have evolved over time in western culture Theorists in the twentieth century such as Klein and Winnicott Huizinga and Callois Piaget Bruner and Vygotsy brought different perspectives to our understanding of play s role in our society In particular Vygotsky s theories about process provide insight into how children attend to learning and assimilate new information The increasing use of digital media as both an entertainment and learning environment at ever younger ages is generating new discussions about the nature and value of play in children s development in particular physical or somatic play The emphasis on games intended for children necessitates a discussion of the cognitive behavioral and neuroscience that supports play activities and physical engagement as a crucial aspect of development The book then looks at the trajectory of digital games in contemporary culture and explores whether these artifacts whether intended for learning or entertainment have extended or are curtailing boundaries of somatic engagement Finally the book discusses alternative play and game design and speculates on the future of new media play artifacts

A Pragmatic Approach to Agency in Group Activity Herman Witzel,2019-11-18 A Pragmatic Approach to Agency in Group Activity builds towards an action theory that explains how new forms agency develop in group activity The approach starts from practical insights about group activity and develops a new understanding of agency from there This study shows how practical interactions and structures in group activity disrupt individual agency It is concluded that important features

of agency can be realized on a group level Different types of group activities are analyzed in order to better understand these mechanisms and consequently revisit our understanding of agency It is argued that intentionality the key concept in individual action theory merely serves as a pseudo explanatory connection between specific features of agency and their realization in humans This is contrasted with empirical research showing that how humans act is far from the idealized concept of intentionality Consequently intentionality as a key explanatory concept is rejected and replaced by a diverse set of features of agency for a similarly diverse set of kinds of agency In this view groups display new forms agency beyond individual agency without making the groups agents themselves Such is the nature of group agency
