Regression Models Censored Sample Selected Or Truncated Data:

Regression Models Richard Breen, 1996-01-09 What techniques can social scientists use when an outcome variable for a sample for example y is not representative of the population for which generalized results are preferred Author Richard Breen provides an introduction to regression models for such data including censored sample selected and truncated data *Regression Models* begins with a discussion of the Tobit model and examines issues such as maximum likelihood estimation and the interpretation of parameters The author next discusses the basic sample selection model and the truncated regression model Elaborating on the modeling of censored and sample selected data via maximum likelihood he shows the close links between the models introduced and other regression models for non continuous dependent variables such as the ordered probit Concluding with an exploration of some of the criticisms of these approaches and difficulties associated with them this volume gives readers a guide to the practical utility of these models *Analysis of Nominal Data* H. T.

Reynolds, 1977 Monograph describing different methodologies models for nominal data analysis in social research defines nominal data as a matter of discrete is or is not data collecting and creating models with either one or several predictors and considers measures of association and multivariate analysis test factor stratification and log linear models Bibliography pp 81 and 82 and statistical tables *Analysis of Ordinal Data* David K. Hildebrand, James D. Laing, Howard Rosenthal, 1977 Ordinal data can be rank ordered but not assumed to have equal distances between categories Using support by judges for civil rights measures and bussing as the primary example this paper indicates how such data can best be analyzed

Processing Data Linda Brookover Bourque, Virginia Clark, 1992-06-06 This volume highlights the theory that decisions made during the design of a data collection instrument influence the kind of data and the format of the data that are available for analysis Opening with a discussion on the selection of the data collection technique s and how this impacts on data processing and the data for later analysis the book covers key issues such as should you create your own instrument for a questionnaire how do you test a questionnaire what are the characteristics of good data processing how to deal with missing data how to scale an evaluation and create subfiles for analysis In addition each major section concludes with examples and when appropriate directs the reader to commonly available computer software that can aid in data processing

Ordinal Item Response Theory Wijbrandt van Schuur, 2011-05-04 Ordinal Item Response Theory is volume 169 in the SAGE Series Quantitative Applications in the Social Sciences QASS The of Ordinal Item Response Theory is referred to throughout many other QASS titles and fills a gap between the more classical topics of undimensional scaling test theory principal component and factor analysis In addition this volume also discusses parametric item response theory and latent class analysis This monograph is less technical than many books on the market and is best suited for an introductory course in social science measurement *Exploring Rating Scale Functioning for Survey Research* Stefanie A. Wind, 2022-12-18 This book provides researchers with an overview of rating scale analysis along with practical guidance on how to conduct such

analyses with their own survey data Author Stefanie A Wind presents three categories of methods Rasch models non Rasch Item Response Theory IRT models and non parametric models together with practical examples **Differential Item Functioning** Steven J. Osterlind, Howard T. Everson, 2009-09-30 This new edition presents an up to date description of differential item functioning It describes varying procedures for addressing DIF in practical testing contexts The authors present useful examples and studies of DIF that readers may employ as a guide in their own work They also cover major statistical packages that can be employed in DIF analysis e g SPSS SAS M Minitab and Systat This text is ideal for the measurement professional or advanced student who deals with educational or psychological assessment *Latent Growth Curve Modeling* Kristopher J. Preacher, 2008-06-27 Provides easy to follow didactic examples of several common growth modeling approaches *Secondary Analysis of Survey Data* K. Jill Kiecolt, Laura E. Nathan, 1985 This volume presents strategies for locating survey data and provides a comprehensive guide to US social science data archives describing several major data files Although the data sets are American the techniques are widely applicable Causal Analysis with Panel Data Steven E. Finkel, 1995-01-17 Panel data which consist of information gathered from the same individuals or units at several different points in time are commonly used in the social sciences to test theories of individual and social change This book provides an overview of models that are appropriate for the analysis of panel data focusing specifically on the area where panels offer major advantages over cross sectional research designs the analysis of causal interrelationships among variables Without painting panel data as a cure all for the problems of causal inference in nonexperimental research the author shows how panel data offer multiple ways of strengthening the causal inference process In addition he shows how to estimate models that contain a variety of lag specifications reciprocal effects and imperfectly measured variables Appropriate for readers who are familiar with multiple regression analysis and causal modeling this book will offer readers the highlights of developments in this technique from diverse disciplines to analytic traditions
