Power Structure John E. Kwoka Jr.,2007-08-28 *Power Structure* examines the effects on economic performance of several key features of the U S electric power industry Paramount among these are public versus private ownership vertical integration versus deintegration and retail competition versus monopoly distribution Each of these as well as other structural characteristics of utilities and their markets are analyzed for their effects on costs and price These issues are important for a number of reasons The U S electric power industry is presently embarking on a fundamental restructuring in terms of integration and competition In other countries

privatization of state owned enterprises is being viewed as the answer to unsatisfactory performance From a longer perspective the question of the relative performance of publicly owned versus privately owned utilities in the U S has never been resolved And despite much speculation there is little reliable evidence as to the importance of either vertical integration or competition

Regulation and Economic Analysis R.L. Gordon, 2013-03-09 *Regulation and Economic Analysis A Critique Over Two Centuries* argues that long experience with the practice of regulation creates a broad anti intervention consensus among economists This consensus is based on comparison of real intervention to real markets rather than an ideological preconception It is shown that economic theory can support all possible positions on intervention Much theory is too abstract to support any policy position many arguments about how intervention might help contain qualifications expressing doubts about whether the potential can be realized many theories illustrate the drawbacks of intervention The vast literature on these issues concentrates either on specific cases or polemics that exaggerate both sides of the argument *Regulation and Economic Analysis* seeks to show the depth of the discontent develop interpretations of economic theory that follow from skepticism about statism and provide selected illustrations The discussion begins with examination of general equilibrium theory and proceeds to discuss market failure with stress on monopoly and particularly what is deemed excessive concern with predatory behavior International trade issues transaction costs property rights economic theories of government the role of special institutions such as contracts the defects of macroeconomic and equity arguments for regulating individual markets environmental economics and the defects of public land management policies are examined
