Relativistic Astrophysics Igor D. Novikov, Ia. B. Zel'dovic, 1978 Einstein's Field Equations and Their Physical Implications Bernd G. Schmidt, 2008-01-11 This book serves two purposes The authors present important aspects of modern research on the mathematical structure of Einstein's field equations and they show how to extract their physical content from them by mathematically exact methods The essays are devoted to exact solutions and to the Cauchy problem of the field equations as well as to post Newtonian approximations that have direct physical implications Further topics concern quantum gravity and optics in gravitational fields The book addresses researchers in relativity and differential geometry but can also be used as additional reading material for graduate students **Topology** John G. Hocking, Gail S. Young, 2012-05-23 Superb one year course in classical topology Topological spaces and functions point set topology much more Examples and problems Bibliography Index **The Philosophy of Space and Time** Hans Reichenbach, 2012-03-13 A clear penetrating exposition of developments in physical science and mathematics brought about by non Euclidean geometries including in depth coverage of the foundations of geometry theory of time other topics Introduction to Symbolic Logic and Its Applications Rudolf Carnap, 2012-07-12 Clear comprehensive and rigorous treatment develops the subject from elementary concepts to the construction and analysis of relatively complex logical languages Hundreds of problems examples and exercises 1958 edition *Analytical Methods of Optimization* D. F. Lawden, 2006-05-05 Suitable for advanced undergraduates and graduate students this text surveys the classical theory of the calculus of variations It takes the approach most appropriate for applications to problems of optimizing the behavior of engineering systems Two of these problem areas have strongly influenced this presentation the design of the control systems and the choice of rocket trajectories to be followed by terrestrial and extraterrestrial vehicles Topics include static systems control systems additional constraints the Hamilton Jacobi equation and the accessory optimization problem Prerequisites include a course in the analysis of functions of many real variables and a familiarity with the elementary theory of ordinary differential equations especially linear equations Emphasis throughout the text is placed upon methods and principles which are illustrated by worked problems and sets of exercises Solutions to the exercises are available from the publisher upon request
