Richard E.J. Kelly, Nicholas A. Drake, Stuart L. Barr, 2004-10-22 Understanding and predicting the behaviour of natural and human environmental systems is crucial for the effective management of the Earth's limited resources. Recently great advances have been made through spatial modelling. This book provides a snapshot of the latest research in modelling technologies and methodologies within five environmental fields: the cryosphere, hydrology, geomorphology, vegetation, interfaces and urban environments. *Spatial Modelling of the Terrestrial Environment* deals with the use of remote sensing, numerical models and GIS in addressing important natural and human environmental sciences issues, focusing on the theory and application of modelling remotely sensed data within the context of environmental processes. Extensive case material exemplifies the latest research and modelling paradigms presented in the book. **Remote Sensing of the Terrestrial Environment** Colston Research Society, 1977

The book details the background theory of the GNSS techniques discussed and takes the reader through applications and implementation. Tables comparing GNSS with other geodetic techniques such as SAR, VLBI, SLR and conventional geodetic methods such as strainmeters, tiltmeters and leveling surveys are also included. The book concludes with a chapter bridging both parts, discussing the relationship between earthquakes, volcanism and climate change. The book is aimed at academics, researchers and advanced students working in the fields of remote sensing technologies or natural hazards. It is divided into two parts, with the first covering the monitoring of earthquakes, volcanoes and applications of GNSS signals to better understand earthquakes and volcanism, while the second part covers monitoring climate change with GNSS. Provides a detailed focus on the utility of GNSS technologies for dealing with natural hazards. Details theory and applications.
