Scalable Enterprise Systems Vittal Prabhu, Soundar Kumara, Manjunath Kamath, 2012-12-06 The National Science Foundation NSF is the leading sponsor of basic academic research in engineering and its influence far exceeds its budget We think NSF is at its best when it uses that influence to focus interest within the researcher community on critical new challenges and technologies NSF's Scalable Enterprise Systems SES initiative for which we were responsible in our successive terms in the division of Design Manufacture and Industrial Innovation DMII was just such a venture A collaborative effort spanning NSF's engineering and computer science directorates SES sought to concentrate the energies of the academic engineering research community on developing a science base for designing planning and controlling the extended spatially and managerially distributed enterprises that have become the norm in the manufacture distribution and sale of the products of U S industry The of associated issues addressed included everything from management supply chains to product design across teams of collaborating companies to e marketing and make to order manufacturing to the information technology challenges of devising inter operable planning and control tools that can scale with exploding enterprise size and scope A total of 27 teams with nearly 100 investigators were selected from the 89 submitted proposals in the Phase I exploratory part of the effort see the list below Seven of these were awarded larger multi year grants to continue their research in Phase II As the contents of this book amply illustrate these investigations continue to flourish with and without direct NSF support

Levermore,Cheng Hsu,2006-11-24 Global supply chain is a fact of life in today s world From the perspective of the First World this practice reigns in outsourcing of jobs that in the view of many threatens a way of life This argument actually implies that outsourcing represents a fair chance for the Third World to catch up and reverse leverage through market economy However many in the Third World are also opposed to the global market economy from an opposite argument The fact that matters is of course that globalization continues to progress relentlessly in its own momentum and that the national playing grounds continue to level globally for both Worlds Would globalization results in the rich nations getting richer and the poor poorer or would it help the world united in the same economical reason The questions that we the researchers could try to answer are a different kind the kind that leads to the understanding of the elements of the fittest in the global competition For instance what defines an enterprise s staying power on the top of the food chain or an economy s ability to design and control the global supply chains in the long term Evidently to understand this ability the field needs to study the engineering prowess required as much as the finance and management if the history of industrial revolution is any guide Yet the study on the engineering of global supply chains has been largely lacking Information and Management Systems for Product Customization Thorsten Blecker,Gerhard Friedrich,Bernd Kaluza,Nizar Abdelkafi,Gerold Kreutler,2005-12-28 In today s competitive environment manufacturing and service companies are intensifying their customization processes Customization means companies must meet the challenge of providing individualized products and

services without introducing high costs Therefore companies must address both customization and cost factors to gain a competitive advantage While product customization is the manufacturing of products according to individual customer needs it does not involve any focus on the cost perspective Information and Management Systems for Product Customization will concentrate on both product customization and costs efficiency which is termed as mass customization Moreover mass customization with its multi dimensions is the new business paradigm challenging today s manufacturing companies
