Lenoski, Wolf-Dietrich Weber, 2014-06-28 Dr Lenoski and Dr Weber have experience with leading edge research and practical issues involved in implementing large scale parallel systems They were key contributors to the architecture and design of the DASH multiprocessor Currently they are involved with commercializing scalable shared memory technology

Shared Memory Multiprocessing Norihisa Suzuki, 1992 Shared memory multiprocessors are becoming the dominant architecture for small scale parallel computation This book is the first to provide a coherent review of current research in shared memory multiprocessing in the United States and Japan It focuses particularly on scalable architecture that will be able to support hundreds of microprocessors as well as on efficient and economical ways of connecting these fast microprocessors The 20 contributions are divided into sections covering the experience to date with multiprocessors cache coherency software systems and examples of scalable shared memory multiprocessors

Scalable Shared Memory Multiprocessors Michel Dubois, Shreekanth S. Thakkar, 2012-12-06 The workshop on Scalable Shared Memory Multiprocessors took place on May 26 and 27 1990 at the Stouffer Madison Hotel in Seattle Washington as a prelude to the 1990 International Symposium on Computer Architecture About 100 participants listened for two days to the presentations of 22 invited speakers from academia and industry promote the free exchange of ideas among researchers working on shared memory multiprocessor architectures There was ample opportunity to argue with speakers and certainly participants did not refrain a bit from doing so Clearly the problem of scalability in shared memory multiprocessors is still a wide open question We were even unable to agree on a definition of scalability Authors had more than six months to prepare their manuscript and therefore the papers included in this proceedings are refinements of the speakers presentations based on the criticisms received at the workshop As a result 17 authors contributed to these proceedings We wish to thank them for their diligence and care The contributions in these proceedings can be partitioned into four categories 1 Access Order and Synchronization 2 Performance 3 Cache Protocols and Architectures 4 Distributed Shared Memory Particular topics on which new ideas and results are presented in these proceedings include efficient schemes for combining networks formal specification of shared memory models correctness of trace driven simulations synchronization various coherence protocols
