**Schaum's Outline of UML** Simon Bennett, John Skelton, Ken Lunn, 2005

In the more than seven years since the Object Management Group (OMG) adopted the Unified Modeling Language (UML), UML has established itself as the de facto industry standard for modeling software systems. In 2001, OMG put together a task force to revise UML Version 1.0. In March of 2003, UML Version 2.0 was finalized and rolled out to the 35 major companies participating in the adoption effort and made available to the public. This book provides a step-by-step guide to the notation and use of UML, one of the most widely used object-oriented notation systems/programming languages in existence. The outline demonstrates the use of the techniques and notation of UML through case studies in systems analysis, showing the student clearly how UML is used in all kinds of practical situations. This revised edition will discuss the new infrastructure of the latest UML Version 2.0 and will include new examples, review questions, and notations.

**Data Structures for Raster Graphics** Laurens R.A. Kessener, Frans J. Peters, Marloes L.P. van Lierop, 2012-12-06

Raster graphics differs from the more traditional vector or line graphics in the sense that images are not made up from line segments but from discrete elements orderly arranged in a two-dimensional rectangular region. There are two reasons for the growing popularity of raster graphics or bit-mapped displays: 1) the possibilities they offer to show extremely realistic pictures; 2) the dropping prices of those displays and associated processors and memories. With the rise of raster graphics, all kinds of new techniques, methods, algorithms, and data representations are associated, such as ray tracing, raster operations, and quadrees, bringing with them a lot of fruitful research. As stated above, raster graphics allows to create extremely realistic synthesized pictures. There are important applications in such diverse areas as industrial design, flight

Simulation education image processing and animation Unfortunately many applications are hampered by the fact that with the present state of the art they require an excessive amount of computing resources Hence it is worthwhile to investigate methods and techniques which may be of help in reducing computer costs associated with raster graphics applications Since the choice of data structures influences the efficiency of algorithms in a crucial way a workshop was set up in order to bring together a limited number of experienced researchers to discuss this topic The workshop was held from 24 to 28 June 1985 at Steensel a tiny village in the neighbourhood of Eindhoven the Netherlands
