acronym for Computer Supported Collaborative Learning However some would argue that collaborative is often not a descriptive term for what learners do in instructional settings further as the field develops the technology used to support collaboration may not always involve computers at least not in the direct ways they have been used to support instruction in the past To avoid getting bogged down in this terminological debate this book uses CSCL as a designation in its own right leaving open to interpretation precisely what words it stands for The authors talk a great deal about the theory underlying their work In part this is because that is what they were asked to do but it is also an indication of the state of the field In an established paradigm in which the theories and methods are well agreed upon such discussion is less central CSCL however has not yet reached the stage of normal science There is much to be worked out yet This book is offered with the hope that it will help to define a direction for future work in this field The chapters appear in alphabetical order except for the introductory chapter and the afterword not for lack of a better way to organize the chapters but rather because the organizational possibilities are too numerous and this order does not privilege one over another By not imposing a topical organizing structure on this collection it is hoped that readers will feel freer to explore the chapters in a way that best suits their needs
