Science Matters:

Science Matters Robert M. Hazen, James Trefil, 2009-06-02 A science book for the general reader that is informative enough to be a popular textbook and yet well written enough to appeal to general readers Hazen and Trefil are unpretentious good down to earth we can explain anything science teachers the kind you wish you had but never did The New York Times Book Review Knowledge of the basic ideas and principles of science is fundamental to cultural literacy But most books on science are often too obscure or too specialized to do the general reader much good Science Matters is a rare exception a science book that is informative enough for introductory courses in high school and college and yet lucid enough for readers uncomfortable with scientific jargon and complicated mathematics And now revised and expanded it is up to date so that readers can enjoy Hazen and Trefil's refreshingly accessible explanations of the most recent developments in science from particle physics to biotechnology

Science Matters Maria Burguete, 2008 All earnest and honest human quests for knowledge are efforts to understand Nature which includes both human and nonhuman systems the objects of study in science Thus broadly speaking all these quests are in the science domain The methods and tools used may be different for example the literary people use mainly their bodily sensors and their brain as the information processor while natural scientists may use in addition measuring instruments and computers Yet all these activities could be viewed in a unified perspective OCo they are scientific developments at varying stages of maturity and have a lot to learn from each other That OC everything in Nature is part of scienceOCO was well recognized by Aristotle da Vinci and many others Yet it is only recently with the advent of modern science and experiences gathered in the study of statistical physics complex systems and other disciplines that we know how the human related disciplines can be studied scientifically Science Matters is about all human dependent knowledge wherein humans the material system of Homo sapiens are studied scientifically from the perspective of complex systems It includes all the topics covered in the humanities and social sciences Containing contributions from knowledgeable humanists social scientists and physicists the book is intended for those OCo from artists to scientists OCo who are curious about the world and are interested in understanding it with a unified perspective

The Canadian Horror Film Gina Freitag, André Loiselle, 2015-01-01 From the cheaply made tax shelter films of the 1970s to the latest wave of contemporary eco horror Canadian horror cinema has rarely received much critical attention Gina Freitag and Andr Loiselle rectify that situation in *The Canadian Horror Film* with a series of thought provoking reflections on Canada's terror of the soul a wasteland of docile damnation and prosaic pestilence where savage beasts and mad scientists rub elbows with pasty suburbanites grumpy seamen and baby faced porn stars Featuring chapters on Pontypool Ginger Snaps 1970s slasher films Quebec horror and the work of David Cronenberg among many others *The Canadian Horror Film* unearths the terrors hidden in the recesses of the Canadian psyche It examines the highlights of more than a century of Canadian horror filmmaking and includes an extensive filmography to guide both scholars and enthusiasts alike through this treacherous
