Science And Culture In Europe:

Science and Culture in Europe Jean-Marc Lévy-Leblond, John Durant, Jane Gregory, 1993 Science in School and the Future of Scientific Culture in Europe Science in school, the future of scientific culture in Europe, 1999-05-01 Report for all Europe and separate chapters for 13 member states **Science, Culture, and Popular Belief in Renaissance Europe** Stephen Pumfrey, Paolo L. Rossi, Maurice Slawinski, 1991 These essays ranging widely across the cultural and geographical terrain of Renaissance Europe have been specifically written by 12 established scholars from Italy France Britain and North America who review for general readers and advance for those beginning research the current understanding of traditional disciplines and practices and the emerging empirical and mathematical science Distributed in the US and Canada by St Martin's Annotation copyrighted by Book News Inc Portland OR **Research in Science Education in Europe** Geoff Welford, Jonathan Osborne, Phil Scott, 2005-08-02 A range of topical issues and concerns at the forefront of research in science education in Europe are examined in this text The contributors are science educators and researchers from throughout Europe **Science Cultures in a Diverse World: Knowing, Sharing, Caring** Bernard Schiele, Xuan Liu, Martin W. Bauer, 2021-09-13 Science and technology culture is now more than ever at the very heart of the social project and all countries to varying degrees participate in it raising scientific literacy improving the image of the sciences involving the public in debates and encouraging the young to pursue careers in the sciences Thus the very destiny of any society is now entwined with its ability to develop a genuine science and technology culture accessible for participation not only to the few who by virtue of their training or trade work in the science and technology fields but to all thereby creating occasions for society to debate and to foster a positive dialogue about the directions of change and future choices This book organized on the theme of knowing sharing caring new insights for a diverse world which was derived from the observation that globalization rests upon diversity diversity of contexts public research strategies and new innovating practices and aims to stimulate exchanges discussions and debates to initiate a reflection conducive to decentring and to be an opportunity for enrichment by providing the reader with means to achieve the potentialities of that diversity through a comparison of the visions that underpin the attitudes of social actors the challenges they perceive and the potential solutions they consider Thus this book aims first and foremost to raise questions in such a manner that readers so stimulated will feel compelled to contribute and will do so In this spirit however significant the results presented and shared are less important than the questions they seek to answer How are we to rethink the diffusion the propagation and the sharing of scientific thought and knowledge in an ever more complex and diverse world What to know What to share How do we do it when science is broken down across the whole spectrum of the world's diversity The book is recommended for those who are interested in science communication and science cultures in the new media era in contemporary social dynamics and in the evolution of the role of the state and of institutions It is also an excellent reference for researchers engaging in science communication public

The Cultural Authority of Science Martin Bauer, Petra Pansegrau, Rajesh Shukla, 2018-09-24 The cultural authority of science is the authority that is granted to science in any particular context This authority is as much a matter of image and perceived legitimacy as of statutory guarantee However while authority can be charismatic based on tradition or based on competence we would assume that science aims to be an authority of competence To what extent does science have the last word or stand above opinion on public issues This Indo European led collaboration aims to map the cultural authority of science and to construct a system of indicators to observe this science culture based on artefacts science news analysis and espoused beliefs and evaluations public attitude data Indeed through a series of studies the authors examine the cultural authority of science in light of the challenges posed by European Asian African and American developments and debates In particular two main ideas are examined the Lighthouse model whereby science is shining into a stormy sea of ignorance and mistrust and the Bungee Jump model which demonstrates how science occasionally experiences a rough ride against a backdrop of goodwill Presenting expertise in discourse analysis computer assisted text analysis and largescale survey analysis The Cultural Authority of Science will be of interest to a global audience concerned with the standing of science in society In particular it may appeal to scholars and students of fields such as sociology of science science communication science studies scientometrics innovation studies and social psychology **Perspectives of Science in Central and Eastern Europe** Quirin Schiermeier, Judith Ockenden, 2001 **Science & Culture** , 1958 **Science Today** Ralph Levinson, Jeffrey N. The Sciences in the European Periphery During the Enlightenment K. Gavroglu, 2013-03-07 The articles in this volume of ARCHIMEDES examine particular cases of reception in ways that emphasize pressing historiographical and methodological issues. Such issues arise in any consideration of the transmission and appropriation of scientific concepts and practices that originated in the several centers of European learning subsequently to appear often in considerably altered guise in regions at the European periphery. They discuss the transfer of new scientific ideas, the mechanisms of their introduction, and the processes of their appropriation at the periphery. The themes that frame the discussions of the complex relationship between the origination of ideas and their reception include the ways in which the ideas of the Scientific Revolution were introduced, the particularities of their expression in each place, the specific forms of resistance encountered by these new ideas, the extent to which such expression and resistance displays national characteristics, the procedures through which new ways of dealing with nature were made legitimate, and the commonalities and differences between the methods developed by scholars for handling scientific issues.

Science in the Age of Baroque Ofer Gal, Raz Chen-Morris, 2012-11-28 This volume examines the New Science of the 17th century in the context of Baroque culture, analysing its emergence as an integral part of the high culture of the period. The collected essays explore themes common to the new practices of knowledge production and the rapidly changing culture surrounding them, as well as the obsessions, anxieties, and aspirations they share, such as the foundations of order, the power and peril of mediation, and the conflation of the natural and the artificial. The essays also take on the historiographical issues involved in the characterization of culture in general and culture of knowledge in particular, the use of generalizations like Baroque, and the status of such categories, and the role of these in untangling the historical complexities of the tumultuous 17th century. The canonical protagonists of the Scientific Revolution are considered, and so are some obscure and suppressed figures: Galileo side by side with Scheiner, Torricelli together with Kircher, Newton as well as Scilla. The coupling of Baroque and Science defies both the still triumphalist historiographies of the Scientific Revolution and the slight embarrassment that the Baroque represents for most cultural national histories of Western Europe. It signals a methodological interest in tensions and dilemmas rather than self-affirming narratives of success and failure, and provides an opportunity for reflective critique of our historical categories, which is valuable in its own right.

Populism and Science in Europe Hande Eslen-Ziya, Alberta Giorgi, 2022-05-18 This book provides the first systematic and comparative analysis of the intersections of populism and science in Europe from the perspective of political sociology. Populism is the object of rich scholarly debate over its definition and the best way to approach its study. But until now little attention has been paid to the relationships between populism and science. Recently the Covid 19 crisis has exposed the contradictions in this relationship, and this book combines an analysis of the theoretical aspects of the relationship between populism and science with rigorous empirical research. The theoretical perspectives show populism as a thin ideology, as discourse and performance, and as a political logic, considering both right wing and left wing.

populism and focus on leaders as well as citizens The book also offers an overview of controversies within different fields of science including case studies on food science climate change vaccination gender theory COVID 19 and environmental issues The book will be of interest to scholars and students of a number of social science disciplines including political sociology political science and political psychology **Science Communication in the World** Bernard Schiele, Michel

Claessens, Shunke Shi, 2012-04-02 This volume is aimed at all those who wonder about the mechanisms and effects of the disclosure of knowledge Whether they have a professional interest in understanding these processes generally or they wish to conduct targeted investigations in the PCST field it will be useful to anyone involved in science communication including researchers academics students journalists science museum staff scientists high public profiles and information officers in scientific institutions **Science, Culture, and Modern State Formation** Patrick Carroll, 2006-10-02 This highly original

groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England Patrick Carroll develops the concept of engine science to capture the centrality of engineering practices and technologies in the emerging mechanical philosophy He traces the introduction of engine science into colonial Ireland showing how that country subsequently became a laboratory for experiments in statecraft Carroll's wide ranging study spanning institutions political philosophy and policy implementation demonstrates that a number of new technological developments from cartography statistics and natural history to geology public health and sanitary engineering reveal how modern science came to engineer land people and the built environment into a material political state in an unprecedented way creating the modern state Shedding new light on sociology the history of science and technology and on the history of British colonial projects in Ireland from the seventeenth to the nineteenth centuries his study has implications for understanding postcolonial occupations and nation building ventures today and on contemporary dilemmas such as the role of science and government in environmental sustainability This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England **Science under siege** Peter Banks, Daniel Lunney, Chris

Dickman, 2012-11-01 On Saturday 29 November 2008 the Royal Zoological Society of NSW held a forum with the theme of Science under siege As the RZS is a zoological society zoology under threat became the secondary theme and the basis for selecting speakers This book records that forum with the papers developed for this book as the written word from the spoken presentations Papers that were presented as posters are included as are the edited plenary sessions which featured questions from the floor with answers and comments encouraged from anyone in the forum We were delighted that Mark Horstman from ABC Catalyst was willing to replace his peripatetic colleague Paul Willis who was nonetheless very happy to write the foreword There is a place for such skilled science communicators we need more of them and scientists at the lab

bench or in the field or exploring computer models or those that have now taken a job in the policy world need to stay in touch with them Some might say that the title Science under siege seems a bit extreme but we invite you to examine the evidence as presented in this book What follows is an edited version of the introductory material that advertised the forum The title looks dramatic but if you ask yourself is anything killing the science in your area of interest you might be surprised that you come up with a point or two Then ask a wider set of questions such as are there any pressures that preclude people from doing good zoology do either political budgetary constraints impact on your field is science in the media a subject that influences the outcome of your work are there economic impediments to careers in zoology is the education mix in Australia right for this new century are the best researchers becoming full time administrators or the converse the poor researchers becoming the administrators can you place the Australian situation in an international context are there reduced opportunities for human interactions with the natural world is the virtual world killing reality and what are your predictions of the future To deal with such issues the Royal Zoological Society of NSW has structured the day to emphasize a range of themes beginning with identifying the issues including those that are persistent and those that are emerging and encompassing palpable hits to science Direct and indirect hits to science include such matters as the withdrawal of funding subversion of science death by 1000 cuts redirection of funding to fashion issues and using the name of science to justify things that are really not justifiable The name of science is being dragged down We need to confront the ever present problem of ignoring the scientifically accurate for the politically correct This raises such questions as to whether basic skills in biology are not being acquired because of public concern based on extreme animal rights propaganda Good science is not optional but what can be done if you are under siege The answers include understanding the philosophy of science the legal perspective and asking what scientists are or should be doing Audience participation will be a central part of this forum The plenary sessions will address questions raised by the speakers and the posters and debate issues and consider options for future directions It is widely known that it is hard to pull a major paper together on this theme but so many scientists know of at least one matter that they would like to draw to public attention So short contributions are included Listen to the speakers present some overarching themes or compelling case studies contribute to the debate on the day then examine your stance on a variety of these subjects to see whether the day changes your view of this often cryptic aspect of zoology As editors we wish to acknowledge the skills of the referees all papers were refereed by two peers and the patience of the authors for what has been a long gap between the date of the forum and this publication By the end of 2008 the Royal Zoological Society of NSW along with everyone else was caught by the GFC Global Financial Crisis and we simply had to extend the length of the queue for publication We also reassessed our mode of publication The Council of the Society voted to publish this production as an ebook as well as a short print run for formal library deposit and other essential matters The ebook is open access to enhance the reach of the papers and the ideas At the same time the Royal Zoological Society of NSW signed a contract for a

more international mode of access of the publications of the Society and papers are now available via Metapress <http://rzsns.wmetapress.com> Science remains under siege in our view and now we have been alerted to the range of issues it becomes easier to spot the small irritating closing of options that collectively amount to a denial of science and its relegation to an optional way of looking at the world During production of this book this matter became obvious on a number of fronts which led us to invite the paper by Rosie Cooney and colleagues to defend their science of kangaroo conservation and commercial harvesting from an attack on the science We also saw that this issue of science under siege needs more airing and the Royal Zoological Society of NSW is planning its forum for the end of 2012 to take up another strand of this theme by capitalizing on the lifelong insights of scientists under the rubric of grumpy scientists an ecological conscience of a nation This idea in fact derives directly from the suggestions in the plenary sessions by Nick Holmes and Charley Krebs We are also concerned for young scientists with science under siege manifesting often in a failure to create permanent careers for science graduates that advance science itself and zoology in particular from flourishing and identifying problems and finding solutions If we want to conserve the native fauna of Australia then Australian zoologists will have to be key team members We contend that to put science under siege and zoology under threat we not only further imperil our native wildlife but also the careers of the small band of specialists that can see the issues find the problems implement solutions and evaluate the outcomes In short science under siege is not a light matter and no one in this forum thought so Read on form an opinion and speak up and publish your thoughts your examples and your solutions South African Journal of Science ,1929 **The Problem of**

Nutrition Josep Lluís Barona,Josep Lluís Barona Vilar,2010 The first decades of the 20th century were marked by a crisis The impact of the Great War the rise of the workers revolutionary movement and the National Socialist expansion as well as the disaster of the 1929 crash and the great depression of the 1930s created a landscape of tension radicalism and political instability In this context nutrition emerges as an excellent ground from which to explore the genesis of experimental knowledge the social interests involved and the transfer of knowledge and practices to public health the economy trade and politics The exceptional confluence of all factors influencing the interwar period contributed to building the problem of nutrition This book offers a wide perspective including international agencies committed to a global approach to define nutritional problems agricultural reforms surveys in different countries and rural areas methodological agreements on nutritional standards the main trends of experimental research the dreadful impact of the war and some experiments developed in internment camps The author examines nutrition as a cornerstone to show interactions between science politics economy and public health **Political Science in Central-East Europe** Rainer Eisfeld,Leslie A.
