

Science In A Renaissance Society

William Scott Shelley

Science In A Renaissance Society:

Science in a Renaissance Society William Persehouse Delisle Wightman, 1972 A historical study of the interrelations of science and society from c 1450 to c 1620 Printing medicine and the discovery of the New World are considered against a background of political and religious change The final chapters emphasize the influence of quantification the concern with natural magic and the psychological motivation of such leading figures in the so called Scientific Revolution as Kepler Gilbert and Bacon

The Reenchantment of the World Morris Berman, 1981 Morris Berman's book addresses what I consider to be the most important topic at our present moment in history He is searching for the underpinnings of a new world view that can give rise to a culture capable of relating gently and self sustainingly to the earth Frederick Ferr The Reenchantment of the World is a perceptive study of our scientific consciousness and a cogent and forceful challenge to its supremacy Focusing on the rise of the mechanistic idea that we can know the natural world only by distancing ourselves from it Berman shows how science acquired its controlling position in the consciousness of the West He analyzes the holistic animistic tradition destroyed in the wake of Scientific Revolution of the sixteenth and seventeenth centuries which viewed man as a participant in the cosmos not as an isolated observer Arguing that the holistic world view must be revived in some credible form before we destroy our society and our environment he explores the possibilities for a consciousness appropriate to the modern era Ecological rather than animistic this new world view would be grounded in the real and intimate connection between man and nature

The Palace Academy of Henry III Robert J. Sealy, 1981

Science in the Renaissance Clarisse Doris Hellman, 1955

Paracelsus Andrew Weeks, 1997-01-01 Paracelsus is commonly regarded as one of the great figures of sixteenth century Europe and of German intellectual history This book examines the content of his writings in order to clarify it and its historical context

Art and Science Stephen Richards Graubard, 1986 This volume brings together a distinguished collection of thinkers to consider the complex relation and divergence between art and science How art and science relate to technology why they should be thought relevant to morality and what their study can possibly contribute to the understanding of the nature of the mind are only a few of the subjects explored in these pages

Science and the Secrets of Nature William Eamon, 2020-06-30 By explaining how to sire multicolored horses produce nuts without shells and create an egg the size of a human head Giambattista Della Porta's Natural Magic 1559 conveys a fascination with tricks and illusions that makes it a work difficult for historians of science to take seriously Yet according to William Eamon it is in the how to books written by medieval alchemists magicians and artisans that modern science has its roots These compilations of recipes on everything from parlor tricks through medical remedies to wool dyeing fascinated medieval intellectuals because they promised access to esoteric secrets of nature In closely examining this rich but little known source of literature Eamon reveals that printing technology and popular culture had as great if not stronger an impact on early modern science as did the traditional academic disciplines

Creational Theology and the History of Physical Science: The Creationist Tradition

from Basil to Bohr Christopher B. Kaiser, 2021-12-06 This volume documents the role of creational theology in discussions of natural philosophy medicine and technology from the Hellenistic period to the early twentieth century Four principal themes are the comprehensibility of the world the unity of heaven and earth the relative autonomy of nature and the ministry of healing Successive chapters focus on Greco Roman science medieval Aristotelianism early modern science the heritage of Isaac Newton and post Newtonian mechanics The volume will interest historians of science and historians of the idea of creation It simultaneously details the persistence of tradition and the emergence of modernity and provides the historical background for later discussions of creation and evolution **Science, Art and Nature in Medieval and Modern**

Thought A.C. Crombie, 1990-07-01 The author sees the history of Western Science as the history of a vision and an argument initiated by the ancient Greeks in their search for principles at once of nature and of argument itself This scientific vision explored and controlled by argument and the diversification of both vision and argument by scientific experience and by interaction with the wider contexts of intellectual culture constitute the long history of European scientific thought Underlying that development have been specific commitments to conceptions of nature and of science and its intellectual and moral assumptions accompanied by a recurrent critique their diversification has generated a series of different styles of scientific thinking and of making theoretical and practical decisions which the work describes *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1971 First multi year cumulation covers six years 1965 70

Boyle Studies Michael Hunter, 2016-03-09 The significance of Robert Boyle 1627 91 as the most influential English scientist in the generation before Newton is now generally acknowledged but the complexity and eclecticism of his ideas has also become increasingly apparent This volume presents an important group of studies of Boyle by Michael Hunter the leading expert on Boyle s life and thought It forms a sequel to two previous books Hunter s Robert Boyle Scrupulosity and Science 2000 and The Boyle Papers Understanding the Manuscripts of Robert Boyle 2007 Like them it conveniently brings together material otherwise widely scattered in essay volumes and academic journals while nearly a third of the book s content is hitherto unpublished The collection opens with a substantial introduction that places the studies that follow in the context of existing studies of Boyle appended to it is an annotated edition of Boyle s telling list of desiderata for science The next three essays comprise a group of essentially biographical studies exploring various aspects of Boyle s life and intellectual evolution after which three others provide further evidence of the convoluted Boyle divulged in Robert Boyle Scrupulosity and Science Finally we have two chapters one hitherto published only in French and the other not at all which throw important light on topics that preoccupied Boyle in the last few years of his life the supernatural and the exotic Together these essays add greater depth to our understanding of Boyle both as an individual and as a natural philosopher

Achievement In Science D. Bhaskara Rao, 1995 Contents Introduction Related Literature Research Design Data Analysis and Findings Conclusions and Discussion "On Second Thought" and Other Essays in the History of Medicine and

Science Owsei Temkin, 2002-01-11 Over the course of a career spanning most of the twentieth century distinguished historian Owsei Temkin has argued passionately for the necessity of chronicling and analyzing the history of medicine The essays presented in this book span Dr Temkin's career bringing together new pieces and many previously unavailable outside the journals in which they were originally published Here the reader will find new thoughts and ideas that deviate from Dr Temkin's earlier beliefs and reflect a lifetime of research into the historical and ethical foundations of modern medicine

Mapping the Dynamics of Science and Technology Michel Callon, 1986-09-08 This book is a collection of works regarding the interactions of science technology and society Merchants and Marvels Pamela Smith, Paula

Findlen, 2013-10-18 The beginning of global commerce in the early modern period had an enormous impact on European culture changing the very way people perceived the world around them Merchants and Marvels assembles essays by leading scholars of cultural history art history and the history of science and technology to show how ideas about the representation of nature in both art and science underwent a profound transformation between the age of the Renaissance and the early 1700s

The New Cambridge Bibliography of English Literature: Volume 1, 600-1660 George Watson, Ian Roy

Willison, 1974-08-29 More than fifty specialists have contributed to this new edition of volume 1 of *The Cambridge*

Bibliography of English Literature The design of the original work has established itself so firmly as a workable solution to the immense problems of analysis articulation and coordination that it has been retained in all its essentials for the new edition The task of the new contributors has been to revise and integrate the lists of 1940 and 1957 to add materials of the following decade to correct and refine the bibliographical details already available and to re shape the whole according to a new series of conventions devised to give greater clarity and consistency to the entries Science, Alchemy and the Great

Tartaglia's Science of Weights and Mechanics in the Sixteenth Century Raffaele Pisano, Danilo

Capecchi, 2015-08-25 This book presents a historical and scientific analysis as historical epistemology of the science of weights and mechanics in the sixteenth century particularly as developed by Tartaglia in his *Quesiti et inventioni* diverse Book VII and Book VIII 1546 1554 In the early 16th century mechanics was concerned mainly with what is now called statics and was referred to as the *Scientia de ponderibus* generally pursued by two very different approaches The first was usually referred to as Aristotelian where the equilibrium of bodies was set as a balance of opposite tendencies to motion The second

usually referred to as Archimedean identified statics with centrobarica the theory of centres of gravity based on symmetry considerations In between the two traditions the Italian scholar Niccol Fontana better known as Tartaglia 1500 1557 wrote the treatise *Quesiti et inventioni diverse* 1546 This volume consists of three main parts In the first a historical excursus regarding Tartaglia s lifetime his scientific production and the *Scientia de ponderibus* in the Arabic Islamic culture and from the Middle Ages to the Renaissance is presented Secondly all the propositions of Books VII and VIII by relating them with the *Problemata mechanica* by the Aristotelian school and *Iordani opvsculvm de ponderositate* by Jordanus de Nemore are examined within the history and historical epistemology of science The last part is relative to the original texts and critical transcriptions into Italian and Latin and an English translation This work gathers and re evaluates the current thinking on this subject It brings together contributions from two distinguished experts in the history and historical epistemology of science within the fields of physics mathematics and engineering It also gives much needed insight into the subject from historical and scientific points of view The volume composition makes for absorbing reading for historians epistemologists philosophers and scientists
