E. R. Lloyd,1999-12-01 Lloyd examines a set of topics central to ancient Greek medicine and biology in particular theories of beliefs about animals women and the efficacy of drugs He is concerned throughout with the interaction between scientific theory on the one hand and popular or folkloric belief on the other as well as with the ideological character of ancient scientific inquiry and its limitations Lloyd discusses the development of zoological taxonomy the impact that Greek assumptions about the inferiority of the female sex had on medical practice and the relationship between high and low science in pharmacology and anatomy Anthropology provides a comparative dimension raising broader issues under debate in the philosophy and sociology of science *Writing Science* Markus Asper,2013-06-26 Scientific and technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field s extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication *The Monochord in Ancient Greek Harmonic Science* David Creese,2010-06-10 Traces the history of the monochord from its earliest appearance to Claudius Ptolemy mid second century AD *Reader's Guide to the History of Science* Arne Hessenbruch,2013-12-16 The Reader s Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn *Science and Technology in World History* James Edward McClellan,Harold Dorn,2006-04-14 Publisher description **Archimedes and the Door of Science** Jeanne Bendick,1995-08-01 Jeanne Bendick through text and pictures admirably succeeds in bringing to life the ancient Greek mathematician who enriched mathematics and all branches of science Against the backdrop of Archimedes life and culture the author discusses the man s work his discoveries and the knowledge later based upon it The simple often humorous illustrations and diagrams greatly enhance the text **The Way and the Word** Geoffrey Ernest Richard Lloyd,Nathan Sivin,2002-01-01 The rich civilizations of ancient China

and Greece built sciences of comparable sophistication each based on different foundations of concept method and organization In this engrossing book two world renowned scholars compare the cosmology science and medicine of China and Greece between 400 B C and A D 200 casting new light not only on the two civilizations but also on the evolving character of science Sir Geoffrey Lloyd and Nathan Sivin investigate the differences between the thinkers in the two civilizations what motivated them how they understood the cosmos and the human body how they were educated how they made a living and whom they argued with and why The authors new method integrally compares social political and intellectual patterns and connections demonstrating how all affected and were affected by ideas about cosmology and the physical world They relate conceptual differences in China and Greece to the diverse ways that intellectuals in the two civilizations earned their living interacted with fellow inquirers and were involved with structures of authority By A D 200 the distinctive scientific strengths of both China and Greece showed equal potential for theory and practice Lloyd and Sivin argue that modern science evolved not out of the Greek tradition alone but from the strengths of China Greece India Islam and other civilizations which converged first in the Muslim world and then in Renaissance Europe
