Literature and Science Charlotte Sleight, 2017-09-16 The growing field of literature and science is for the first time given a fully theorized overview Using case studies from a three hundred year history Sleight focuses on literary form and argues that novels did not just reflect or inform areas of science but were part of a broader ongoing cultural negotiation about how to read things

Against Methodology in Science and Religion Josh Reeves, 2018-09-14 Since its development as a field over the last part of the twentieth century scholars in science and religion have been heavily concerned with methodological issues Following the lead of Thomas Kuhn many scholars in this interdisciplinary field have offered proposals that purport to show how theology and science are compatible by appropriating theories of scientific methodology or rationality Arguing against this strategy this book shows why much of this methodological work is at odds with recent developments in the history and philosophy of science and should be reconsidered Firstly three influential methodological proposals are critiqued Lakatosian research programs Alister McGrath s Scientific Theology and the Postfoundationalist project of Wentzel van Huyssteen Each of these approaches is shown to have a common failing the idea that science has an essential nature with features that unite scientific or even rational inquiry across time or disciplines After outlining the issues this failing could have on the viability of the field the book concludes by arguing that there are several ways scholarship in science and religion can move forward even if the terms science and religion do not refer to something universally valid or philosophically useful This is a bold study of the methodology of science and religion that pushes both subjects to consider the other more carefully As such it will be of great interest to scholars in religious studies theology and the philosophy of science

History of Technology Volume 29 Ian Inkster, 2016-09-30 The common question from the western point of view is of the sort why did China lose its early leadership of productive technologies to Europe during the early modern period Answers to this seemingly clear enquiry vary from general cultural inwardness to the interferences of imperial governance This collection surveys such theories but alters the issue by raising the notion that Chinese technologies did not so much fail as move along a path different from that of Europe Our second collection on the Mindful Hand also shifts common ground by querying and modifying common views of the links between knowledge and technique in early modern European development Scientific or related knowledge was not brought to technique as a socio cultural gift from an educated

elite to the working man Rather educated gents practitioners instrument makers craftsfolk and technicians of all kinds intermingled both socially and in terms of the recognition of technical problems as well as in the assemblage of the mental commercial and cognitive resources required to pursue innovative production projects Freethinkers in Europe Carolin Kosuch,2020-08-10 This volume brings together for the first time case studies on secularists of the 19th and early 20th centuries in national and transnational perspectives including examples from all over Europe Its focus is on freethinkers taken as secular avant gardes and early promoters of secularity The authors of this book deal with multiple historical religious social and cultural backgrounds and in these contexts analyze freethinkers organizations projects networks and contributions to forming a secular worldview in particular the promotion of concrete undertakings such as civil baptism or initiatives to leave church Next to this secularist agenda the contributions also take into account ambivalences and difficulties freethinkers were faced with namely the tensions between a national self image and the transnational direction the movement has taken the regional base of many projects and their transregional horizon freethinkers cultural programs and their immanent political mission and the dialogue with respectively the conceptual distinction from other secularist groups Readers interested in the history of secularity will learn that it was a heterogeneous enterprise already in its beginnings This set the course for later European and global developments **It Takes Two to Do Science** Henri

Eisendrath,2009 The editors hope that this book will serve as a catalyst for young scientists to understand the importance of teamwork and to enjoy its benefits Book Jacket *Science and the State* John Gascoigne,2019-03-21 The first historical overview of the partnership between science and the state from the Scientific Revolution to World War II Engines of the Imagination Jonathan Sawday,2007-11-30 At what point did machines and technology begin to have an impact on the cultural consciousness and imagination of Europe How was this reflected through the art and literature of the time Was technology a sign of the fall of humanity from its original state of innocence or a sign of human progress and mastery over the natural world In his characteristically lucid and captivating style Jonathan Sawday investigates these questions and more by engaging with the poetry philosophy art and engineering of the period to find the lost world of the machine in the pre industrial culture of the European Renaissance The aesthetic and intellectual dimension of these machines appealed to familiar figures such as Shakespeare Francis Bacon Montaigne and Leonardo da Vinci as well as to a host of lesser known writers and artists in the sixteenth and seventeenth centuries This intellectual engagement with machines in the European Renaissance gave rise to new attitudes towards gender work and labour and even fostered the new sciences of artificial life and reason which would be pursued by figures such as Descartes Hobbes and Leibniz in the seventeenth century Writers philosophers and artists had mixed and often conflicting reactions to technology reflecting a paradoxical attitude between modern progress and traditional values Underpinning the enthusiastic creation of a machine driven world then were stories of loss and catastrophe These contradictory attitudes are part of the legacy of the European Renaissance just as much as the

plays of Shakespeare or the poetry of John Milton And this historical legacy helps to explain many of our own attitudes towards the technology that surrounds us sustains us and sometimes perplexes us in the modern world *The Christian Intellectual Tradition from the Reformation to the Modern Era* Josh A. Reeves, Kirstin Anderson Birkhaug, Annalise J. K. DeVries, Gabrielle Stanton Ray, Jennifer Woodruff Tait, 2025-11-04 This reader with commentary helps Christians understand and critically examine major arguments that have been made in the Western intellectual tradition through an examination of great texts The book explores themes related to the natural world human nature politics and God The core of a liberal arts education lies in the debates made possible by a shared set of texts and questions Combining their expertise in science theology political science and history the authors guide readers through the most important sections of classic texts from the Reformation to the modern era explaining their significance and the debates they sparked The texts are organized around four themes God science society and human nature Rather than simply summarizing the texts this introduction presents them in a way that allows readers to engage directly with the material The authors provide historical context point out potential themes and connections and encourage readers to explore the ideas and questions the texts raise Reflection questions are included This book facilitates teaching for professors from a wide variety of disciplines and will work well for students in great books courses In addition it will be of interest to Christian classical learning organizations including high schools
