Science, Faith and Society Michael Polanyi, 1964-08-15 In its concern with science as an essentially human enterprise Science Faith and Society makes an original and challenging contribution to the philosophy of science On its appearance in 1946 the book quickly became the focus of controversy Polanyi aims to show that science must be understood as a community of inquirers held together by a common faith science he argues is not the use of scientific method but rather consists in a discipline imposed by scientists on themselves in the interests of discovering an objective impersonal truth That such truth exists and can be found is part of the scientists faith Polanyi maintains that both authoritarianism and scepticism attacking this faith are attacking science itself

Numbers, Ronald A. Binzley, 2018-10-15 Why is the idea of conflict between science and religion so popular in the public imagination The conflict thesis the idea that an inevitable and irreconcilable conflict exists between science and religion has long been part of the popular imagination In *The Warfare between Science and Religion* Jeff Hardin Ronald L. Numbers and Ronald A. Binzley have assembled a group of distinguished historians who explore the origin of the thesis its reception the responses it drew from various faith traditions and its continued prominence in public discourse Several essays in the book examine the personal circumstances and theological idiosyncrasies of important intellectuals including John William Draper and Andrew Dickson White who through their polemical writings championed the conflict thesis relentlessly Other essays consider what the thesis meant to different religious communities including evangelicals liberal Protestants Roman Catholics Eastern Orthodox Christians Jews and Muslims Finally essays both historical and sociological explore the place of the conflict thesis in popular culture and intellectual discourse today Based on original research and written in an accessible style the essays in *The Warfare between Science and Religion* take an interdisciplinary approach to question the historical relationship between science and religion This volume which brings much needed perspective to an often bitter controversy will appeal to scholars and students of the histories of science and religion sociology and philosophy Contributors Thomas H. Polkinghorne,2009-07-27 John C Polkinghorne internationally renowned priest scientist addresses fundamental questions about how scientific and theological worldviews relate to each other in this the second volume originally published in 1988 of his trilogy which also included Science and Providence and One World Dr Polkinghorne illustrates how a scientifically minded person approaches the task of theological inquiry postulating that there exists a close analogy between theory and experiment in science and belief and understanding in theology He offers a fresh perspective on such questions as Are we witnessing today a revival a natural theology the search for God through the exercise of reason and the study of nature How do the insights of modern physics into the interlacing of order and disorder relate to the Christian doctrine of Creation What is the relationship between mind and matter Polkinghorne states that the remarkable insights that science affords us into the intelligible workings of the world cry out for an explanation more profound than that which it itself can provide Religion if it is to take seriously its claim that the world is the creation of God must be humble enough to learn from science what that world is actually like The dialogue between them can only be mutually enriching *Religion and the Sciences of Origins* Kelly James Clark,2014-05-21 This concise introduction to science and religion focuses on Christianity and modern Western science the epicenter of issues in science and religion in the West with a concluding chapter on Muslim and Jewish Science and Religion This book also invites the reader into the relevant literature with ample quotations from original texts *Science and Religion: Fifty Years After Vatican II* Kenan Osborne,Ki Wook Min,2014-01-31 In the past one hundred years two major realities have changed both science and religion The world of science has been enriched by quantum physics the computation of the age of the universe archaeological data in the Middle East and a scientific stress on historical writing The world of religion has been enriched by the establishment of the World Council of Churches and the Second Vatican Council In the past fifty years major scientists and major religious leaders have met together again and again In the past fifty years religious leaders from Christianity Islam and Judaism have held a number of thought provoking conferences In this volume these gatherings are reviewed and evaluated Two major religious problems have challenged the science religion discussions namely which God should the scientists agree on the Trinitarian God Allah or Yahweh Which history of the universe sponsored by these three religions

should scientists be looking for This volume raises questions and suggests some preliminary forms of serious discussion

Science and Religion, 1450-1900 Richard G. Olson, Richard Olson, 2006-03-10 Galileo Newton Darwin These giants are remembered for their great contributions to science Often forgotten however is the profound influence that Christianity had on their lives and work This study explores the many ways in which religion its ideas attitudes practices and institutions interacted with science from the beginnings of the Scientific Revolution to the end of the nineteenth century Both scientists and persons of faith sometimes characterize the relationship between science and religion as confrontational Historian Richard G Olson finds instead that the interactions between science and religion in Western Christendom have been complex often mutually supportive even transformative This book explores those interactions by focusing on a sequence of major religious and intellectual movements from Christian Humanist efforts to turn science from a primarily contemplative exercise to an activity aimed at improving the quality of human life to the widely varied Christian responses to Darwinian ideas in both Europe and North America during the second half of the nineteenth century
