Science Technology And The Environment Multidisciplinary Perspectives:

Science, Technology, and the Environment James Rodger Fleming, Henry A. Gemery, 1994 In *Science Technology and the Environment Multidisciplinary Perspectives* James Rodger Fleming and Henry A Gemery have collected thirteen essays that explore the various ways in which scientists and humanists apprehend environmental problems [The Cambridge History of Science: Volume 5, The Modern Physical and Mathematical Sciences](#) David C. Lindberg, Mary Jo Nye, Roy Porter, Ronald L. Numbers, 2003 A new and comprehensive examination of the history of the modern physical and mathematical sciences [Science, Technology, and the Environment](#) James Rodger Fleming, Henry A. Gemery, 1994 In *Science Technology and the Environment Multidisciplinary Perspectives* James Rodger Fleming and Henry A Gemery have collected thirteen essays that explore the various ways in which scientists and humanists apprehend environmental problems

Science and Politics Brent S. Steel, 2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect *Science and Politics An A to Z Guide to Issues and Controversies* is a must have resource for researchers and students who seek to deepen their understanding of the connection between science and politics *Biotechnology and Bioethics*, 1996 *The Technological Fix* Lisa Rosner, 2013-02-01 The term technological fix should mean a fix provided by technology a solution for all of our problems from medicine and food production to the environment and business Instead technological fix has come to mean a cheap quick fix using inappropriate technology that usually creates more problems than it solves This collection sets out the distinction between a technological fix and a true technological solution Bringing together scholars from a variety of disciplines the essays trace the technological fix as it has appeared throughout the twentieth century Addressing such fixes as artificial hearts industrial agriculture and climate engineering these essays examine our need to turn to technology for solutions to all of our problems **When Ideology Trumps Science** Erika Allen Wolters, Brent S. Steel, 2017-12-01 This book reveals how embedded beliefs more so than a lack of scientific knowledge and understanding are creating a cognitive bias toward information that coincides with personal beliefs rather than scientific consensus and that this anti science bias exists among liberals as well as conservatives In 2010 an outbreak of whooping cough in California infected more than 8 000

people resulting in the hospitalization of more than 800 people and the death of 10 infants In 2015 an outbreak of the measles in Disneyland infected more than 125 people Both the whooping cough and the measles are vaccine preventable diseases VPDs that have been largely nonexistent in the United States for decades As these cases demonstrate individuals who prioritize ideology or personal beliefs above scientific consensus can impinge on society at large and they illustrate how rejecting science has unfortunate results for public health and for the environment When Ideology Trumps Science examines how proponents of scientific findings and the scientists responsible for conducting and communicating the applicable research to decision makers are encountering direct challenges to scientific consensus Using examples from high stakes policy debates centered on hot button controversies such as climate change GMO foods immunization stem cell research abstinence only education and birth control authors Wolters and Steel document how the contested nature of contemporary perspectives on science leads to the possibility that policymakers will not take science into account when making decisions that affect the general population In addition the book identifies ways in which liberals and conservatives have both contested issues of science when consensus diverges from their ideological positions and values It is a compelling must read for public policy students and practitioners Competition Law and Economic Inequality Jan Broulík, Katalin

Cseres, 2022-12-15 The gap between the rich and poor is widening across the globe This book explores whether this major societal challenge of our time can be addressed by the means of competition law The primary goal of today's competition law is to ensure that market power does not lead to an inefficient production of goods and services Nevertheless even such efficiency oriented curbing of market power may arguably contribute to the reduction of differences in how much people own and earn Furthermore many competition law regimes do take into account distributive considerations too The chapters investigate the relationship between competition law and economic inequality from philosophical historical and economic perspectives Their inquiries concern the conceptual foundations of competition law and doctrinal frameworks of individual jurisdictions as well as specific problems and markets As such the book provides a novel and comprehensive overview of whether and how competition law can contribute to more equality in both developed and developing countries The book is a must read for researchers public officials judges and practitioners within the competition law community It will also appeal to anyone more broadly interested in issues of inequality and economic policy **Biotechnology, Risk**

Assessment/biosafety, 1996 **Historical Essays on Meteorology, 1919-1995** James Fleming, 2016-06-30 On the occasion of its 75th anniversary the American Meteorological Society engaged a number of eminent pioneers and leading practitioners to write about the fields they helped develop They were joined by several professional historians of science and technology The resulting essays constitute a substantial sampling of what has been learned since 1919 in the atmospheric sciences and services in research in education and in the private sector This volume will be of interest to weather professionals and enthusiasts historians of science and to students of science and history It will help us calibrate where we

are where we have been and where we might be going as a discipline Hopefully it will inspire others to value the past and to dig into it more deeply Such attention to history is a necessary step in the maturation of a scientific discipline

Epistemic Communities, Constructivism, and International Environmental Politics Peter Haas, 2015-08-20 Epistemic Communities Constructivism and International Environmental Politics brings together 25 years of publications by Peter M Haas The book examines how the world has changed significantly over the last 100 years discusses the need for new constructivist scholarship to understand the dynamics of world politics and highlights the role played by transnational networks of professional experts in global governance Combining an intellectual history of epistemic communities with theoretical arguments and empirical studies of global environmental conferences as well as international organizations and comparative studies of international environmental regimes this book presents a broad picture of social learning on the global scale In addition to detailing the changes in the international system since the Industrial Revolution Haas discusses the technical nature of global environmental threats Providing a critical reading of discourses about environmental security this book explores governance efforts to deal with global climate change international pollution control stratospheric ozone and European acid rain With a new general introduction and the addition of introductory pieces for each section this collection offers a retrospective overview of the author s work and is essential reading for students and scholars of

environmental politics international relations and global politics **Climate Displacement** Jamie Draper,2023-11-01
Climate change is reshaping patterns of displacement around the world Extreme weather events destroy homes
environmental degradation threatens the viability of livelihoods sea level rise and coastal erosion force communities to
relocate and risks to food and resource security magnify the sources of political instability Climate displacement the
displacement of people driven at least in part by the impacts of climate change is a pressing moral challenge that is
incumbent upon us to address This book develops a political theory of climate displacement Most work on climate
displacement has tended to take an idealized climate refugee as its focus But focusing on the figure of the climate refugee
obscures the complexity and heterogeneity of climate displacement Instead this book takes the empirical dynamics of climate
displacement as its starting point It examines the moral and political problems raised by the interaction of climate change
and displacement in five domains community relocation territorial sovereignty labour migration refugee movement and
internal displacement In each context climate displacement raises distinct questions which this book explores on their own
terms At the same time this book treats climate displacement as a unified phenomenon by examining the overarching
questions of responsibility and fairness that it raises The result is an empirically grounded political theory that both maps the
conceptual terrain of climate displacement and charts a course for meeting the moral challenge that it raises The
Material Geographies of the Belt and Road Initiative Elia Apostolopoulou,Han Cheng,Jonathan Silver,Alan Wiig,2025-11-20
EPUB and EPDF available open access under CC BY NC ND licence China s Belt and Road Initiative BRI commonly called the
New Silk Road is a huge infrastructure project currently revitalising or creating new trading routes and large developments
across the globe It is estimated to cost up to US 8 trillion and impact more than 65% of the world s population This book
explores the unequal ways this controversial project is altering livelihoods places and the environment From road building
projects in Nairobi to grassroots environmental activism in Thailand researchers from the Global North and South analyse
the real world impacts of this unprecedented project bringing together critical geography and political ecology approaches
