

Time in Science

Time is used in **two** ways

One way is to identify a **particular moment** in the past or future

- It is **just** a time of day
- This is the way “time” is used in **everyday conversation**

The second way is to describe a **quantity** of time

- “How **much** time?”
- **A time interval** is also a quantity of time
- Any calculation that you do **will involve** time intervals not time of day

New Living Science PHYSICS for CLASS 9 With More Numerical Problems , Time for Science Education Michael Matthews, 2012-12-06 The book s argument depends as do most proposals in education upon certain positions in the philosophy of education I believe that education should be primarily concerned with developing understanding with initiation into worthwhile traditions of intellectual achievement and with developing capacities for clear analytic and critical thought These have been the long accepted goals of liberal education In a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about intellectual things These liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators The book s argument might be consistent with other views of education especially ones about the training of

specialists sometimes called a professional view of education but the argument fits best with a liberal view of education The liberal hope has always been that if education is done well then other personal and social goods will follow The development of informed critical and moral capacities is the cornerstone for personal and social achievements *Exploring Science Through Science Fiction* Barry B.
