Seismic Reflection Processing:

Processing of Seismic Reflection Data Using MATLAB Wail A. Mousa, Abdullatif A. Al-Shuhail, 2022-05-31 This short book is for students professors and professionals interested in signal processing of seismic data using MATLAB™ The step by step demo of the full reflection seismic data processing workflow using a complete real seismic data set places itself as a very useful feature of the book This is especially true when students are performing their projects and when professors and researchers are testing their new developed algorithms in MATLAB™ for processing seismic data The book provides the basic seismic and signal processing theory required for each chapter and shows how to process the data from raw field records to a final image of the subsurface all using MATLAB™ The MATLAB™ codes and seismic data can be downloaded here Table of Contents Seismic Data Processing A Quick Overview Examination of A Real Seismic Data Set Quality Control of Real Seismic Data Seismic Noise Attenuation Seismic Deconvolution Carrying the Processing Forward Static Corrections Seismic Migration Concluding Remarks

Seismic Reflection Processing S.K. Upadhyay, 2004-07-19 The author coherently presents the physical concepts mathematical details and methodology for optimizing results of reservoir modeling under conditions of isotropy and anisotropy The most common form of anisotropy the transverse isotropy is dealt with in detail Besides practical aspects in reservoir engineering such as interval isotropic or anisotropic properties of layered media identifying lithology pore fluid types and saturation and determining crack fracture orientations and density form the core of discussions This book incorporates significant new developments in isotropic and anisotropic reflection processing while organizing them to improve the interpretation of seismic reflection data and optimizing the modeling of hydrocarbon reservoirs The text contains exercises and problems and solutions are provided for the exercises This book is written primarily for graduate postgraduate students and research workers in geophysics

Processing Near-surface Seismic-reflection Data Gregory S. Baker, 1999 The goal of this primer is to provide a basic near surface seismic reflection processing guide for workers who have not had industry or academic supported training or guidance but wish to maintain the integrity of seismic imaging as a tool for near surface exploration Increasingly shallow reflection seismology is being used as a noninvasive tool for determining physical properties and geometry of the upper 100 meters of the subsurface This primer focuses on processing two small data sets using standard common midpoint CMP processing and includes significant processing pitfalls encountered in previous work The primer includes a booklet and accompanying data sets on CD
