Seismological Research Requirements for a Comprehensive Test-Ban Monitoring System National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Panel on Seismological Research Requirements for a Comprehensive Test-Ban Monitoring System, 1995-12-13 Negotiators from more than 35 countries are attempting to formulate a nuclear test ban treaty and delineate a system from monitoring compliance This book covers 1 the desirable characteristics and capabilities of seismic monitoring stations 2 recommendations on the flow paths and handling of the data which are to be unclassified and 3 the types and extent of research that will be needed in the next decade The primary focus of the book is to explore how basic seismological research and test ban monitoring can be mutually beneficial

Research Required to Support Comprehensive Nuclear Test Ban Treaty Monitoring National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Panel on Basic Research Requirements in Support of Comprehensive Test Ban Monitoring, 1997-09-01 On September 24 1996 President Clinton signed the Comprehensive Nuclear Test Ban Treaty at the United Nations Headquarters Over the next five months 141 nations including the four other nuclear weapon states Russia China France and the United Kingdom added their signatures to this total ban on nuclear explosions To help achieve verification of compliance with its provisions the treaty specifies an extensive International Monitoring System of seismic hydroacoustic infrasonic and radionuclide sensors This volume identifies specific research activities that will be needed if the United States is to effectively monitor compliance with the treaty provisions

Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Seismic Event Discrimination and Identification William R. Walter, Hans E. Hartse, 2013-04-18 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data center and onsite inspections to verify compliance The problem of identifying small magnitude banned nuclear tests and discriminating between such tests and the background of earthquakes and mining related seismic events is a challenging research problem Because they emphasize CTBT verification research the

12 papers in this special volume primarily addresses regional data recorded by a variety of arrays broadband stations and temporarily deployed stations Nuclear explosions earthquakes mining related explosions mine collapses single charge and ripple fired chemical explosions from Europe Asia North Africa and North America are all studied While the primary emphasis is on short period body wave discriminants and associated source and path corrections research that focuses on long period data recorded at regional and teleseismic distances is also presented Hence these papers demonstrate how event identification research in support of CTBT monitoring has expanded in recent years to include a wide variety of event types data types geographic regions and statistical techniques

Q of the Earth: Global, Regional, and Laboratory Studies

Barbara Romanowicz, Brian J. Mitchell, 2012-12-06 Variations in seismic Q are sensitive to a much greater extent than are seismic velocity variations on factors such as temperature fluid content and the movement of solid state defects in the earth For that reason an understanding of Q and its variation with position in the earth and with time should provide information in earth's tectonic evolution as well as on aspects of its internal structure Progress in understanding Q has suffered from difficulty in obtaining reliable amplitude data at global and temporary stations Moreover laboratory determinations of Q until recently were most often made at frequencies much higher than those measured by seismologists for waves propagating through the earth Recent advances in seismic station distribution and quality as well as in methodology at both high and low frequencies have greatly improved the quality of observational data available to seismologists from global stations Concurrent advances have been made in measuring Q using laboratory samples at frequencies that pertain to the earth and in theoretical understanding of seismic wave attenuation Papers of this volume present new information on Q in the earth from several perspectives methodology results from global and regional observations of both body and surface waves laboratory measurements and theoretical understanding The editors believe that we have reached a new threshold in Q studies and that advances in data quality and methodology will spur increased interest in this difficult but interesting field

Living on an Active Earth National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Science of Earthquakes, 2003-09-22 The destructive force of earthquakes has stimulated human inquiry since ancient times yet the scientific study of earthquakes is a surprisingly recent endeavor Instrumental recordings of earthquakes were not made until the second half of the 19th century and the primary mechanism for generating seismic waves was not identified until the beginning of the 20th century From this recent start a range of laboratory field and theoretical investigations have developed into a vigorous new discipline the science of earthquakes As a basic science it provides a comprehensive understanding of earthquake behavior and related phenomena in the Earth and other terrestrial planets As an applied science it provides a knowledge base of great practical value for a global society whose infrastructure is built on the Earth's active crust This book describes the growth and origins of earthquake science and identifies research and data collection efforts that will strengthen the scientific and social contributions of this exciting new discipline

Monitoring the Comprehensive Nuclear-Test-Ban Treaty Frode Ringdal, Brian L. N. Kennett, Brian Leslie Norman Kennett, 2001 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data centre IDC and on site inspections to verify compliance This volume contains research papers focusing on seismic event location in the CTBT context The on site inspection protocol of the treaty specifies a search area not to exceed 1000 square km Much of the current research effort is therefore directed towards refining the accuracy of event location by including allowances for three dimensional structure within the Earth The aim is that the true location of each event will lie within the specified source zone regarding postulated location The papers in this volume cover many aspects of seismic event location including the development of algorithms suitable for use with three dimensional models allowances for regional structure use of calibration events and source specific station corrections They provide a broad overview of the current international effort to improve seismic event location accuracy and the editors hope that it will stimulate increased interest and further advances in this important field

Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Source Location Frode Ringdal, Brian L.N. Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Data Processing and Infrasound Zoltan A. Der, Robert H. Shumway, Eugene T. Herrin, 2002-05-01 On September 10 1996 The United Nations General Assembly adopted the Comprehensive Nuclear Test

Ban Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data center IDC and on site inspections to verify compliance This volume presents certain recent research results pertaining on methods used to process data recorded by instruments of the International Monitoring System IMS and addressing recording infrasound signals generated by atmospheric explosions Six papers treating data processing provide an important selection of topics expected to contribute to improving our ability to successfully monitor a CTBT Five papers concerning infrasound include descriptions of ways in which that important research area can contribute to CTBT monitoring the automatic processing of infrasound data and site conditions that serve to improve the quality of infrasound data

Levshin,Michael Ritzwoller,2012-12-06 On September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban Treaty CTBT prohibiting nuclear

explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data center IDC and on site inspections to verify compliance Seismic methods play the lead role in monitoring the CTBT This volume concentrates on the measurement and use of surface waves in monitoring the CTBT Surface waves have three principal applications in CTBT monitoring to help discriminate nuclear explosions from other sources of seismic energy to provide mathematical characterizations of the seismic energy that emanates from seismic sources and to be used as data in inversion for the seismic velocity structure of the crust and uppermost mantle for locating small seismic events regionally The papers in this volume fall into two general categories the development and or application of methods to summarize information in surface waves and the use of these summaries to advance the art of surface wave identification measurement and source characterization These papers cut across essentially all of the major applications of surface waves to monitoring the CTBT This volume therefore provides a general introduction to the state of research in this area and should be useful as a guide for further exploration
