Economics in Context is specifically designed to meet the requirements of a one semester introductory economics course that provides coverage of both microeconomic and macroeconomic foundations. It addresses current economic challenges paying specific attention to issues of inequality, globalization, unpaid work, technology, financialization, and the environment, making the text a genuinely twenty-first century introduction to economics. Aspects of history, institutions, gender, ethics, and ecology are integrated throughout the text, and economic analysis is presented within broader themes of human well-being and social and environmental sustainability. Theoretical expositions in the text are kept close to reality by integrating numerous real-world examples and by presenting the material in the recognized accessible and engaging style of this experienced author team. Key features of *Essentials of Economics in Context* include an inclusive approach to economics where the economy is analyzed within its social and environmental context; an innovative chapter examining data on various economic indicators; focus on goals of human well-being, stability, and sustainability; and inclusion of core and public purpose spheres instead of solely focusing on market activities. A wealth of online materials such as slides, test banks, and answers to exercises is in the book. This text is the ideal resource for one semester introductory economics courses globally. The book's companion website is available at http://www.bu.edu/eci/education/materials/textbooks/essentials_of_economics_in_context/. *The Principle of Trading Economics* Zhenying Wang, 2019-11-23. This book is devoted to establishing a completely new concept within economics referred to as trading economics, which is a reconstructed economic system in theory that seeks perfect harmony between micro and macro elements in a structured way, hence making the economic theory a rigorous system supported by internal logical continuity. Representing a revolution of the existing theoretical framework, trading economics has changed the logic of mainstream economics. Specifically, it deduces the macro whole from the micro individuals and introduces a systematic and comprehensive analysis approach. It stresses that within an interconnected world, the interaction between trading agents is the fundamental driving force behind the operation, development, and evolution of the economic system.
